## 2022 COMMUNITY HEALTH NEEDS ASSESSMENT

Chelan, Douglas, Grant
\& Okanogan Counties, Washington

North Valley Hospital CHNA
Sponsored by Confluence Health

## EXECUTIVE SUMMARY

## North Valley Hospital

North Valley Hospital is not a 501c3 entity and is not required to conduct a Community Health Needs Assessment (CHNA). However, in the view of the Board of Commissioners and the North Valley Hospital Administrative Team the participation and completion with the CHNA process is helpful to develop a more complete understanding of needs, resources, and opportunities to better serve our community.

Past CHNA's are available on our website at www.nvhospital.org/community-health-needs-assessment and are a great resource to understand past work and the evolution of health needs in our region. The scope of the regions identified health needs (summarized on page 17) include opportunities throughout the care continuum from substance abuse, chronic disease, and mental health. While we recognize the need to address all issues, we have found by prioritizing a subset of focus areas produces the most impact.

## North Valley Hospital's Areas of Focus

ACCESS TO HEALTH CARE SERVICES

CHRONIC DISEASE

MENTAL HEALTH

SUBSTANCE ABUSE

- Barriers to Access
- Appointment Availability
- Finding a Physician
- Routine Medical Care (Adults)
- Eye Exams
- Ratings of Local Health Care
- Leading Cause of Death
- Suicide (Age-Adjusted Death Rates)
- Symptoms of Chronic Depression
- Key Informants: Mental health ranked as a top concern.
- Cirrhosis/Liver Disease Deaths
- Use of Prescription Opioids
- Personally Impacted by Substance Abuse (Self or Other's)
- Key Informants: Substance abuse ranked as a top concern.

## INTRODUCTION

## PROJECT OVERVIEW

## Project Goals

This Community Health Needs Assessment is a systematic, data-driven approach to determining the health status, behaviors, and needs of residents in the service area of North Valley Hospital and Confluence Health (Central Washington Hospital and Wenatchee Valley Hospital). Subsequently, this information may be used to inform decisions and guide efforts to improve community health and wellness.

A Community Health Needs Assessment provides information so that communities may identify issues of greatest concern and decide to commit resources to those areas, thereby making the greatest possible impact on community health status. This Community Health Needs Assessment will serve as a tool toward reaching three basic goals:

- To improve residents' health status, increase their life spans, and elevate their overall quality of life. A healthy community is not only one where its residents suffer little from physical and mental illness, but also one where its residents enjoy a high quality of life.
- To reduce the health disparities among residents. By gathering demographic information along with health status and behavior data, it will be possible to identify population segments that are most at-risk for various diseases and injuries. Intervention plans aimed at targeting these individuals may then be developed to combat some of the socio-economic factors that historically have had a negative impact on residents' health.
- To increase accessibility to preventive services for all community residents. More accessible preventive services will prove beneficial in accomplishing the first goal (improving health status, increasing life spans, and elevating the quality of life), as well as lowering the costs associated with caring for late-stage diseases resulting from a lack of preventive care.

This assessment was conducted on behalf of Confluence Health by PRC, a nationally recognized health care consulting firm with extensive experience conducting Community Health Needs Assessments in hundreds of communities across the United States since 1994.

## Methodology

This assessment incorporates data from multiple sources, including primary research (through the PRC Community Health Survey and PRC Online Key Informant Survey), as well as secondary research (vital statistics and other existing health-related data). It also allows for comparison to benchmark data at the state and national levels.

## PRC Community Health Survey

## Survey Instrument

The survey instrument used for this study is based largely on the Centers for Disease Control and Prevention (CDC) Behavioral Risk Factor Surveillance System (BRFSS), as well as various other public health surveys and customized questions addressing gaps in indicator data relative to health promotion and disease prevention objectives and other recognized health issues. The final survey instrument was developed by Confluence Health and PRC.

## Community Defined for This Assessment

The study area for the survey effort (referred to as the "Total Service Area" in this report) includes each of the residential ZIP Codes comprising Chelan, Douglas, Grant, and Okanogan counties in Washington. This community definition, determined based on the ZIP Codes of residence of recent patients of Confluence

## Sample Approach \& Design

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the PRC Community Health Survey. Thus, to ensure the best representation of the population surveyed, a telephone interview methodology - one that incorporates both landline and cell phone interviews - was employed. The primary advantages of telephone interviewing are timeliness, efficiency, and randomselection capabilities.

The sample design used for this effort consisted of a stratified random sample of 801 individuals age 18 and older in the Total Service Area, including 250 in Chelan County, 101 in Douglas County, 300 in Grant County, and 150 in Okanogan County. Once the interviews were completed, these were weighted in proportion to the actual population distribution so as to appropriately represent the Total Service Area as a whole. All administration of the surveys, data collection, and data analysis was conducted by PRC.

For statistical purposes, the maximum rate of error associated with a sample size of 801 respondents is $\pm 3.5 \%$ at the 95 percent confidence level.

## Expected Error Ranges for a Sample of 801 Respondents at the 95 Percent Level of Confidence

## Sample Characteristics

To accurately represent the population studied, PRC strives to minimize bias through application of a proven telephone methodology and random-selection techniques. While this random sampling of the population produces a highly representative sample, it is a common and preferred practice to "weight" the raw data to improve this representativeness even further. This is accomplished by adjusting the results of a random sample to match the geographic distribution and demographic characteristics of the population surveyed (poststratification), so as to eliminate any naturally occurring bias. Specifically, once the raw data are gathered, respondents are examined by key demographic characteristics (namely sex, age, race, ethnicity, and poverty status), and a statistical application package applies weighting variables that produce a sample which more closely matches the population for these characteristics. Thus, while the integrity of each individual's responses is maintained, one respondent's responses may contribute to the whole the same weight as, for example, 1.1 respondents. Another respondent, whose demographic characteristics may have been slightly oversampled, may contribute the same weight as 0.9 respondents.

The following chart outlines the characteristics of the Total Service Area sample for key demographic variables, compared to actual population characteristics revealed in census data. [Note that the sample consisted solely of area residents age 18 and older; data on children were given by proxy by the person most responsible for that child's health care needs, and these children are not represented demographically in this chart.]

# Population \& Survey Sample Characteristics 

 (Total Service Area, 2022)

The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in the defined area with a high degree of confidence.

## INCOME \& RACE/ETHNICITY

INCOME $>$ Poverty descriptions and segmentation used in this report are based on administrative poverty thresholds determined by the US Department of Health \& Human Services. These guidelines define poverty status by household income level and number of persons in the household (e.g., the 2021 guidelines place the poverty threshold for a family of four at $\$ 26,500$ annual household income or lower). In sample segmentation: "low income" refers to community members living in a household with defined poverty status or living just above the poverty level, earning up to twice (<200\% of) the poverty threshold; "mid/high income" refers to those households living on incomes which are twice or more ( $\geq 200 \%$ of) the federal poverty level.

RACE \& ETHNICITY $>$ In analyzing survey results, mutually exclusive race and ethnicity categories are used. All Hispanic respondents are grouped, regardless of identity with any other race group. Other race categories are non-Hispanic categorizations (e.g., "White" reflects non-Hispanic White respondents).

## Online Key Informant Survey

To solicit input from key informants, those individuals who have a broad interest in the health of the community, an Online Key Informant Survey also was implemented as part of this process. A list of recommended participants was provided by Confluence Health; this list included names and contact information for physicians, public health representatives, other health professionals, social service providers, and a variety of other community leaders. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall.

Key informants were contacted by email, introducing the purpose of the survey and providing a link to take the survey online; reminder emails were sent as needed to increase participation. In all, 63 community stakeholders took part in the Online Key Informant Survey, as outlined below:

| ONLINE KEY INFORMANT SURVEY PARTICIPATION |  |
| :--- | :---: |
| KEY INFORMANT TYPE | NUMBER PARTICIPATING |
| Physicians | 1 |
| Public Health Representatives | 1 |
| Other Health Providers | 6 |
| Social Services/Nonprofit Representatives | 19 |
| Community/Business Leaders | 36 |

Final participation included representatives of the organizations outlined below.

- Aging and Adult Care
- Alatheia Riding Center
- Americagroup
- American Heart Association
- America Red Cross-Apple Valley Chapter
- Apple Valley Honda
- Ballard Ambulance
- Big Bend Community College
- Cascade Medical Center
- Cascade Medical Foundation
- Cascade School District
- Chelan County
- Chelan County PUD
- Chelan Douglas Casa
- Chelan Douglas Regional Port Authority
- Chelan Douglas Transportation Council
- City of Cashmere
- City of Chelan
- City of East Wenatchee
- City of Leavenworth
= City of Waterville
- City of Wenatchee
- Columbia Basin Allied Arts
- Columbia Basin Hospital
- Colville Tribal Police Department
- Confluence Health
- Confluence Health Foundation
- EASE Cancer Foundation
- East Wenatchee Police Department
- Epilepsy Foundation
- Foundation for Youth Resiliency and Engagement
- Grand Coulee School District
- Grant County
- Jeffers Danielson Sonn \& Aylward
- John L. Scott Real Estate
- KC-Help
- Laura Mounter Real Estate
- Manson School District
- Mid Valley Hospital
- Molina Healthcare
- Moses Lake Community Health Center
- Moses Lake Police Department
- NCW Nurses Week
- NCW Tech Alliance
- North Central ACH
- North Central Educational Service District
- Okanogan Behavioral HealthCare
- Okanogan County
- Okanogan County Community Action
- Okanogan County Health District
- Okanogan County Sheriff's Office
- Okanogan County Transit
- Okanogan Regional Humane
= Okanogan School District
- Omak School District
- Orondo School District
- Our Valley Our Future
- Pateros Brewster Community Resource Center
- Pateros School District
- People for People
- Port of Quincy
- Rick Pankow Foundation
- SAGE
- Star Ranch
- The Economic Alliance
- Tierra Village
- Together for Youth
- Washington Apple Education Foundation
- Washington State Tree Fruit Association
- Washington State University Extension
- Waterville School District
- Wenatchee Downtown Association
- Wenatchee Police Department
- Wenatchee Valley College
- Wenatchee Valley YMCA
- YWCA

Through this process, input was gathered from several individuals whose organizations work with lowincome, minority, or other medically underserved populations.

In the online survey, key informants were asked to rate the degree to which various health issues are a problem in their own community. Follow-up questions asked them to describe why they identify problem areas as such and how these might better be addressed. Results of their ratings, as well as their verbatim comments, are included throughout this report as they relate to the various other data presented.

NOTE: These findings represent qualitative rather than quantitative data. The Online Key Informant Survey was designed to gather input regarding participants' opinions and perceptions of the health needs of the residents in the area.

## Public Health, Vital Statistics \& Other Data

A variety of existing (secondary) data sources was consulted to complement the research quality of this Community Health Needs Assessment. Data for the Total Service Area were obtained from the following sources (specific citations are included with the graphs throughout this report):

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension, SparkMap (sparkmap.org)
- Centers for Disease Control \& Prevention, Office of Infectious Disease, National Center for HIVIAIDS, Viral Hepatitis, STD, and TB Prevention
- Centers for Disease Control \& Prevention, Office of Public Health Science Services, Center for Surveillance, Epidemiology and Laboratory Services, Division of Health Informatics and Surveillance (DHIS)
- Centers for Disease Control \& Prevention, Office of Public Health Science Services, National Center for Health Statistics
- ESRI ArcGIS Map Gallery
- National Cancer Institute, State Cancer Profiles
- OpenStreetMap (OSM)
- US Census Bureau, American Community Survey
- US Census Bureau, County Business Patterns
- US Census Bureau, Decennial Census
- US Department of Agriculture, Economic Research Service
- US Department of Health \& Human Services
- US Department of Health \& Human Services, Health Resources and Services Administration (HRSA)
- US Department of Justice, Federal Bureau of Investigation
- US Department of Labor, Bureau of Labor Statistics

## Benchmark Data

## Washington Risk Factor Data

Statewide risk factor data are provided where available as an additional benchmark against which to compare local survey findings; these data represent the most recent BRFSS (Behavioral Risk Factor Surveillance System) Prevalence and Trends Data published online by the Centers for Disease Control and Prevention. State-level vital statistics are also provided for comparison of secondary data indicators.

## Nationwide Risk Factor Data

Nationwide risk factor data, which are also provided in comparison charts, are taken from the 2020 PRC National Health Survey; the methodological approach for the national study is similar to that employed in this assessment, and these data may be generalized to the US population with a high degree of confidence. National-level vital statistics are also provided for comparison of secondary data indicators.

## Healthy People 2030

Healthy People provides 10-year, measurable public health objectives - and tools to help track progress toward achieving them. Healthy People identifies public health priorities to help individuals, organizations, and communities across the United States improve health and wellbeing. Healthy People 2030, the initiative's fifth iteration, builds on knowledge gained over the first four decades.

HEALTHY PEOPLE

Healthy People 2030's overarching goals are to:

- Attain healthy, thriving lives and well-being free of preventable disease, disability, injury, and premature death.
- Eliminate health disparities, achieve health equity, and attain health literacy to improve the health and well-being of all.
- Create social, physical, and economic environments that promote attaining the full potential for health and well-being for all.
- Promote healthy development, healthy behaviors, and well-being across all life stages.
- Engage leadership, key constituents, and the public across multiple sectors to take action and design policies that improve the health and well-being of all.

The Healthy People 2030 framework was based on recommendations made by the Secretary's Advisory Committee on National Health Promotion and Disease Prevention Objectives for 2030. After getting feedback from individuals and organizations and input from subject matter experts, the U.S. Department of Health and Human Services (HHS) approved the framework which helped guide the selection of Healthy People 2030 objectives.

## Determining Significance

Differences noted in this report represent those determined to be significant. For survey-derived indicators (which are subject to sampling error), statistical significance is determined based on confidence intervals (at the 95 percent confidence level), using question-specific samples and response rates. For the purpose of this report, "significance" of secondary data indicators (which do not carry sampling error but might be subject to reporting error) is determined by a $15 \%$ variation from the comparative measure.

## Information Gaps

While this assessment is quite comprehensive, it cannot measure all possible aspects of health in the community, nor can it adequately represent all possible populations of interest. It must be recognized that these information gaps might in some ways limit the ability to assess all of the community's health needs.

For example, certain population groups - such as the homeless, institutionalized persons, or those who only speak a language other than English or Spanish - are not represented in the survey data. Other population groups - for example, pregnant women, lesbian/gay/bisexual/ transgender residents, undocumented residents, and members of certain racial/ethnic or immigrant groups - might not be identifiable or might not be represented in numbers sufficient for independent analyses.

In terms of content, this assessment was designed to provide a comprehensive and broad picture of the health of the overall community. However, there are certainly medical conditions that are not specifically addressed.

## Public Comment

Confluence Health made its prior Community Health Needs Assessment (CHNA) report publicly available through its website; through that mechanism, the hospital requested from the public written comments and feedback regarding the CHNA and implementation strategy. At the time of this writing, Confluence Health had not received any written comments. However, through population surveys and key informant feedback for this assessment, input from the broader community was considered and taken into account when identifying and prioritizing the significant health needs of the community. Confluence Health will continue to use its website as a tool to solicit public comments and ensure that these comments are considered in the development of future CHNAs.

## SUMMARY OF FINDINGS

## Significant Health Needs of the Community

The following "Areas of Opportunity" represent the significant health needs of the community, based on the information gathered through this Community Health Needs Assessment. From these data, opportunities for health improvement exist in the area with regard to the following health issues (see also the summary tables presented in the following section).

The Areas of Opportunity were determined after consideration of various criteria, including: standing in comparison with benchmark data (particularly national data); the preponderance of significant findings within topic areas; the magnitude of the issue in terms of the number of persons affected; and the potential health impact of a given issue. These also take into account those issues of greatest concern to the community stakeholders (key informants) giving input to this process.

## AREAS OF OPPORTUNITY IDENTIFIED THROUGH THIS ASSESSMENT

ACCESS TO HEALTH CARE SERVICES

## CANCER

## DIABETES

HEART DISEASE
\& STROKE
INFANT HEALTH \& FAMILY PLANNING

MENTAL HEALTH

NUTRITION, PHYSICAL ACTIVITY \& WEIGHT

POTENTIALLY DISABLING CONDITIONS

SUBSTANCE ABUSE

- Barriers to Access
- Appointment Availability
- Finding a Physician
- Routine Medical Care (Adults)
- Eye Exams
- Ratings of Local Health Care
- Leading Cause of Death
- Blood Sugar Testing [Non-Diabetics]
- Leading Cause of Death
- Teen Births
- Suicide (Age-Adjusted Death Rates)
- Symptoms of Chronic Depression
- Key Informants: Mental health ranked as a top concern.
- Overweight \& Obesity [Adults]
- Overweight \& Obesity [Children]
- High-Impact Chronic Pain
- Alzheimer's Disease Deaths
- Cirrhosis/Liver Disease Deaths
- Use of Prescription Opioids
- Personally Impacted by Substance Abuse (Self or Other's)
- Key Informants: Substance abuse ranked as a top concern.

## Community Feedback on Prioritization of Health Needs

Prioritization of the health needs identified in this assessment ("Areas of Opportunity" above) was determined based on a prioritization exercise conducted among community stakeholders (representing a cross-section of community-based agencies and organizations) in conjunction with the administration of the Online Key Informant Survey.

In this process, these key informants were asked to rate the severity of a variety of health issues in the community. Insofar as these health issues were identified through the data above and/or were identified as top concerns among key informants, their ranking of these issues informed the following priorities:

1. Mental Health
2. Substance Abuse
3. Nutrition, Physical Activity \& Weight
4. Diabetes
5. Heart Disease \& Stroke
6. Cancer
7. Access to Healthcare Services
8. Infant Health \& Family Planning
9. Potentially Disabling Conditions

## Summary Tables:

## Comparisons With Benchmark Data

## Reading the Summary Tables

In the following tables, Total Service Area results are shown in the larger, gray column.
$\square$ The columns to the left of the Total Service Area column provide comparisons among the four counties, identifying differences for each as "better than" (B), "worse than" (h), or "similar to" ( $\%$ ) the combined opposing counties.

The columns to the right of the Total Service Area column provide comparisons between local data and any available state and national findings, and Healthy People 2030 objectives. Again, symbols indicate whether the Total Service Area compares favorably (B), unfavorably (h), or comparably ( $\varepsilon$ ) to these external data.

Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.

Tip: Indicator labels beginning with a "\%" symbol are taken from the PRC Community Health Survey; the remaining indicators are taken from secondary data sources.

|  | DISPARITY AMONG COUNTIES |  |  |  |

## Summary of Key Informant Perceptions

In the Online Key Informant Survey, community stakeholders were asked to rate the degree to which each of 17 health issues is a problem in their own community, using a scale of "major problem," "moderate problem," "minor problem," or "no problem at all." The following chart summarizes their responses; these findings also are outlined throughout this report, along with the qualitative input describing reasons for their concerns. (Note that these ratings alone do not establish priorities for this assessment; rather, they are one of several data inputs considered for the prioritization process described earlier.)

Key Informants: Relative Position of Health Topics as Problems in the Community

# COMMUNITY DESCRIPTION 

## POPULATION CHARACTERISTICS

## Total Population

The Total Service Area, the focus of this Community Health Needs Assessment, is comprised of Chelan, Douglas, Grant, and Okanogan counties; the combined area encompasses 12 686 11 scuare miles and houses a total nonulation of $\mathbf{2 5 5} 596$ residents arcording to latest

## Population Change 2010-2020

A significant positive or negative shift in total population over time impacts health care providers and the utilization of community resources.

Between the 2010 and 2020 US Censuses, the population of the Total Service Area increased by 22,111 persons, or 9.2\%.

BENCHMARK $>$ Lower population increase than was found across the state of Washington.
DISPARITY $>$ Okanogan County recorded the lowest increase.

## Change in Total Population

 (Percentage Change Between 2010 and 2020)

This map shows the areas of greatest increase or decrease in population between 2010 and 2020.

## Urban/Rural Population

Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

The Total Service Area is predominantly urban, with $59.6 \%$ of the population living in areas designated as urban.

BENCHMARK $>$ More rural than the state and US overall.
DISPARITY $>$ Okanogan County is the only predominantly rural county in the service area, while

## Urban and Rural Population

(2010)

Sources: - US Census Bureau Decennial Census.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

Notes: - This indicator reports the percentage of population living in urban and rural areas. Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

Note the following map, outlining the urban population in the Total Service Area.

## Age

It is important to understand the age distribution of the population, as different age groups have unique health needs that should be considered separately from others along the age spectrum.

In the Total Service Area, 26.2\% of the population are children age 0-17; another 56.9\% are age 18 to 64, while $16.9 \%$ are age 65 and older.

BENCHMARK $>$ Similar to state and national proportions.
)kanogan

Total Population by Age Groups
(2015-2019)

## Median Age

Median Age (2015-2019)

The following map provides an illustration of the median age in the Total Service Area.

## Race \& Ethnicity

## Race

In looking at race independent of ethnicity (Hispanic or Latino origin), 73.0\% of residents of the Total Service Area are White and 2.4\% are Native American.

BENCHMARK $>$ The percentage of residents who identify as Native American is higher in the Total Service Area than across the state or nation.

DISPARITY $>$ Okanogan County has the highest proportion of Native American residents.

## Total Population by Race Alone (2015-2019)

Sources: - US Census Bureau American Community Survey 5-year estimates.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

## Ethnicity

A total of 32.4\% of Total Service Area residents are Hispanic or Latino.
BENCHMARK $>$ Much higher than the state or national proportion.

Hispanic Population (2015-2019)

## Linguistic Isolation

A total of $6.6 \%$ of the Total Service Area population age 5 and older live in a home in which no person age 14 or older is proficient in English (speaking only English or speaking English "very well").

BENCHMARK $>$ Higher than the Washington and US findings.

Linguistically Isolated Population

Notes: - This indicator reports the percentage of the population age $5+$ who live in a home in which no person age $14+$ speaks only English, or in which no person age $14+$ speak a non-English language and speak English "very well."

## SOCIAL DETERMINANTS OF HEALTH

## ABOUT SOCIAL DETERMINANTS OF HEALTH

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-oflife outcomes and risks.

Social determinants of health (SDOH) have a major impact on people's health, well-being, and quality of life. Examples of SDOH include:

- Safe housing, transportation, and neighborhoods
- Racism, discrimination, and violence
- Education, job opportunities, and income
- Access to nutritious foods and physical activity opportunities
- Polluted air and water
- Language and literacy skills

SDOH also contribute to wide health disparities and inequities. For example, people who don't have access to grocery stores with healthy foods are less likely to have good nutrition. That raises their risk of health conditions like heart disease, diabetes, and obesity - and even lowers life expectancy relative to people who do have access to healthy foods.

Just promoting healthy choices won't eliminate these and other health disparities. Instead, public health organizations and their partners in sectors like education, transportation, and housing need to take action to improve the conditions in people's environments.

- Healthy People 2030 (https://health.gov/healthypeople)

## Income

## Poverty

The latest census estimate shows $14.1 \%$ of the Total Service Area total population living below the federal poverty level.

BENCHMARK $>$ Higher than the Washington percentage. Fails to satisfy the Healthy People 2030 objective.

DISPARITY $>$ Significantly higher in Okanogan County.

## Among just children (ages 0 to 17), this percentage in the Total Service Area is $19.7 \%$ (representing an estimated 12,941 children).

BENCHMARK $>$ Higher than the Washington percentage. Fails to satisfy the Healthy People 2030 objective.

DISPARITY $>$ Significantly higher in Okanogan County.

## Population in Poverty

(Populations Living Below the Poverty Level; 2015-2019)
Healthy People $2030=8.0 \%$ or Lower

- Total Population - Children

Sources: - US Census Bureau American Community Survey 5-year estimates.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).
- US Department of Health and Human Services. Healthy People 2030. August 2020. http://www.healthypeople.gov

Notes: - Poverty is considered a key driver of health status. This indicator is relevant because poverty creates barriers to access including health services, healthy food, and other necessities that contribute to poor health status.

The following maps highlight concentrations of persons living below the federal poverty level.

## Financial Resilience

## A total of $18.9 \%$ of Total Service Area residents would not be able to afford an unexpected $\$ 400$ expense without going into debt.

BENCHMARK $>$ Favorably lower than the US percentage.
DISPARITY $>$ Significantly higher in Okanogan County. Significantly higher among residents aged 18 to 64 and especially low-income residents.

[^0]
## Do Not Have Cash on Hand to Cover a \$400 Emergency Expense

Charts throughout this report (such as that here) detail survey findings among key demographic groups - namely by sex, age groupings, income (based on poverty status), and race/ethnicity.
Here, "low income" refers to community members living in a household with defined poverty status or living just above the poverty level, earning up to twice ( $<200 \%$ of) the poverty threshold; "mid/high income" refers to those households living on incomes which are twice or more ( $\geq 200 \%$ of) the federal poverty level.
In addition, all Hispanic respondents are grouped, regardless of identity with any other race group. Other race categories are non-Hispanic categorizations (e.g., "White" reflects nonHispanic White respondents).

## Financial Impact of the Pandemic

A total of 21.0\% of Total Service Area residents reported that, since March 2020, they or another household member lost a job, worked fewer hours, or lost health insurance coverage.

Financially Impacted by the Pandemic

## Food Access

Low food access is defined as living more than $1 / 2$ mile from the nearest supermarket, supercenter, or large grocery store.
RELATED ISSUE
See also Nutrition, Physical Activity \& Weight in the Modifiable Health Risks section of this report.

## Low Food Access

US Department of Agriculture data show that $\mathbf{2 6 . 1 \%}$ of the Total Service Area population (representing over 63,000 residents) have low food access, meaning that they do not live near a sunermarket or larae arocerv store.

## Population With Low Food Access

(Percent of Population That Is Far From a Supermarket or Large Grocery Store, 2019)

Surveyed adults were asked: "Now I am going to read two statements that people have made about their food situation. Please tell me whether each statement was "Often True," "Sometimes True," or "Never True" for you in the past 12 months:

- I worried about whether our food would run out before we got money to buy more.
- The food that we bought just did not last, and we did not have money to get more." Those answering "Often" or "Sometimes True" for either statement are considered to be food insecure.

## Food Insecurity

Overall, $18.7 \%$ of community residents are determined to be "food insecure," having run out of food in the past year and/or been worried about running out of food.

BENCHMARK $>$ Much lower than the US percentage.

## MENTAL HEALTH

## ABOUT MENTAL HEALTH \& MENTAL DISORDERS

About half of all people in the United States will be diagnosed with a mental disorder at some point in their lifetime. ...Mental disorders affect people of all age and racial/ethnic groups, but some populations are disproportionately affected. And estimates suggest that only half of all people with mental disorders get the treatment they need.

In addition, mental health and physical health are closely connected. Mental disorders like depression and anxiety can affect people's ability to take part in healthy behaviors. Similarly, physical health problems can make it harder for people to get treatment for mental disorders. Increasing screening for mental disorders can help people get the treatment they need.

## Key Informant Input: Mental Health

# Perceptions of Mental Health as a Problem in the Community 

(Key Informants, 2022)

- Major Problem - Moderate Problem - Minor Problem \# No Problem At All

|  | $71.0 \%$ |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

Lack of resources for behavioral and mental health assistance, especially in the justice system. A behavioral health/diversion center at the county/regional level would help alleviate this issue in our community. - Community Leader
There are not enough mental health services available. Specifically, counselors who treat kids. Also, many have a religious affiliation which is a barrier to many. - Community Leader
Access to care, especially crisis care. - Community Leader
Access to qualified mental health professionals and facilities to house those who need a higher level of mental health care. - Community Leader

Access to behavioral health and supportive services is very limited right now, especially with Covid. - Social Services Provider
Mental health is and going to continue being a major problem. In our area access to mental health is very much lacking. Access to help is over one hour away and often lacking in urgency by the facilitating agency. Community Leader

Timely access to mental health or behavioral health services. - Public Health Representative
Access for second language and students from poverty. Lack of availability in appointments for services. Community Leader
Not enough services available. - Community Leader
Access to mental health professionals. - Social Services Provider
There are too few therapists for those who have Medicaid or have few economic resources to afford therapy. There aren't enough programs for people who need substance abuse treatment and behavioral health services. There aren't enough low-or-no-barrier programs or facilities for people with co-occurring issues. - Public Health Representative
Access to affordable care. - Community Leader
Availability of services. These services are not funded adequately. If I'm correct, the state cut funding several years ago. Law enforcement and the jail are not set up to handle these patients. - Community Leader Long waiting list to receive mental health care or no health coverage. - Social Services Provider
We have no inpatient services. With the increasing community mental health problems, we need better access to overall mental health care. - Community Leader
Accessing care and overcoming their underlying conditions, such as addiction. OBHC does not provide the services necessary to address the real issues. The board there is more interested in personal gain than doing anything to better the community. - Community Leader

## Contributing Factors

There does not seem to be good coordination between MH service providers. A holistic view approach is needed to ensure that prevention, crisis care, and post recovery navigation is in place. This includes street level diversion, pro-active response to individuals that miss appointments or are in need of welfare checks which requires open communication between physicians, care teams and pro-active response teams. Additionally, a centralized location for those that wish to voluntarily commit, are involuntarily committed, and are court ordered for treatment needs to be stood up. The post treatment should include navigators who provide assistance and preventative measures to aid the individual in re-introduction to active community participation. There is a need for crisis stabilization chairs in remote communities to ensure individuals in crisis have the necessary assistance when it is needed, Job training, housing and food security are essential to reintegration after treatment. Community Leader
Lack of ability to access care or the ability to pay for that care. - Social Services Provider
Lack of sufficient personnel (due to budget constraints) at Okanogan Behavioral Health Center to deal with problems when they arise - on time delivery of services during a crisis. Additionally, many MDs are not in touch with how to refer clients to services within clinics that might help reduce stressors, or to other agencies that could also provide assistance such as a provider who does not refer a domestic partner exhibiting signs of domestic violence to the Support Center and does not have the knowledge of services to make a meaningful referral and do a follow-up with the patient. - Social Services Provider
So many levels of this right now. From the extreme of homelessness and screamers on the street to our teens struggling with all the changes and ever moving target of navigation for them. Where can people go for help? Who are at risk and how can that be addressed? The community as a whole struggling with 2 years of restrictions and no end in sight. Someone told me the other day that they are "so tired of the moving target". They are "so done". - Community Leader

Patients that do not have the resources financially or capacity to get help. - Community Leader
Mental Health is becoming more prevalent in the community. This in conjunction with homelessness and substance abuse leads to more crime. Being a rural community, it is difficult to find the personnel that are trained and specialized to handle to issues. - Community Leader
We need support for those with mental health issues. - Community Leader
Not getting accessible help that best meets their needs. Lack of confidentiality from providers in our small town (many HIPPA violations) has created a severe lack of trust from clients. Stigmatization and other narratives around mental health being a liberal issue. - Social Services Provider
Few practitioners, cost, stigma associated with mental health issues. - Community Leader
Lack of community conversation over mental health during COVID pandemic. Lack of understanding who to call when there is an issue (l've seen firefighters intervene with interactions between people with mental health and businesses downtown Moses Lake.) Lack of places for people with mental illness to go for resources, recreation/daytime activities. - Community Leader
Our State has, for all intents and purposes, made hard drug possession and use legal. This has added to the years of under investing in mental health services. When the legislature changed the mission of Eastern and Western State Hospitals, making them more of diagnostic facilities, they did not invest in local facilities that could treat those in mental health crisis or those with chronic mental health disease. Most of these individuals are incapable of making health decisions for themselves, which makes voluntary treatment institutions useless. Family support networks have failed, mostly out of frustration with our current systems. Our same legislators have made very narrow parameters for which to involuntarily mandate treatment. These same conditions have added to our State's homeless populations. - Community Leader

## Lack of Providers

Not enough behavioral health providers of all types. Takes too long to get in to see a behavioral health provider. Very limited inpatient services across the state, particularly limited for youth and people with comorbidities. Also, our ED staff feel the DMHP (I know there's a new title for this, which is escaping me at the moment) is reluctant to ever refer patients on for additional care, exacerbating potential access issues for patients and families. Other Health Provider

Lack of mental health professionals, lack of crisis counselors. - Public Health Representative
Lack of access to behavioral health care providers and inadequate telehealth to meet behavioral health demand.

- Other Health Provider

Lack of therapists and trauma informed services, need more behavioral health therapists, anger management, domestic violence, family therapists, youth/young adult and LGBTQ+ specialists. - Social Services Provider
Not enough mental health providers, distrust of mental health/counseling, cost of services, hours of operation don't work for working poor, lack of Spanish speaking mental health providers and services, need for dual diagnosis services (substance use disorder treatment and mental health care). - Social Services Provider
There are not enough providers, full stop. - Community Leader
Lack of available health care providers and crisis response. - Other Health Provider

## Denial/Stigma

There is still a stigma associated with seeking help and being open about mental health issues. - Social Services Provider
Self-recognition of the problem. Homeless individuals. Stigma that keeps people away from getting help. Community Leader
Getting the help needed. A mental health label is undesirable. - Community Leader

## Incidence/Prevalence

Affects so many people, mainly young adults. - Community Leader
Resilience and coping skills of so many adults and now children is staggering. I am concerned for this generation of children and their parents not being able to cope with changes and challenges. This has impacted the workforce, benefits, and productivity and services. - Community Leader
Mental health and prevalence of suicide. - Public Health Representative
Behavioral Health. There is not enough crossover into the other avenues of health with behavioral health AND there are not enough providers for dual diagnosis folks (ex. behavioral health/substance abuse). Each sector is completely siloed, which leaves a lot of giant gaps that folks fall through. - Community Leader
They are wandering the streets, filling the jails, abusing drugs, and suicidal. - Community Leader

## Due to COVID-19

I feel like the pandemic has exasperated people's sense of isolation from others and has brought to light a lot of mental health challenges that were otherwise unknown. It has also added a lot of stress on people and may have created new mental health challenges. - Community Leader
So don't really know what to do about it, but a huge issue is a lack of kindness and humanity I am seeing in my community. We are known here for how unique sense of place, and that, due to COVID has seemed to have changed. Angry people on social media, angry drivers, angry customers in stores, angry passengers on planes. Also our exhausted health care professionals that have not had a break from this. They have to get up, go to work and do their job. We all need a mental wellness day. Thank you so much for allowing me to answer these questions. - Community Leader

# DEATH, DISEASE \& CHRONIC CONDITIONS 

## LEADING CAUSES OF DEATH

## Distribution of Deaths by Cause

Service Area

Leading Causes of Death
(Total Service Area, 2020)

Notes: - Lung disease is CLRD, or chronic lower respiratory disease.

## Age-Adjusted Death Rates for Selected Causes

## AGE-ADJUSTED DEATH RATES

In order to compare mortality in the region with other localities (in this case, Washington and the United States), it is necessary to look at rates of death - these are figures which represent the number of deaths in relation to the population size (such as deaths per 100,000 population, as is used here).

Furthermore, in order to compare localities without undue bias toward younger or older populations, the common convention is to adjust the data to some common baseline age distribution. Use of these "age-adjusted" rates provides the most valuable means of gauging mortality against benchmark data, as well as Healthy People 2030 objectives.

Note that deaths are coded using the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10). Rates are per 100,000 population, age-adjusted to the 2000 US Standard Population.

The following chart outlines 2018-2020 annual average age-adjusted death rates per 100,000 population for selected causes of death in the Total Service Area.

Each of these is discussed in greater detail in subsequent sections of this report.

## Age-Adjusted Death Rates for Selected Causes <br> (2018-2020 Deaths per 100,000 Population)

|  | Total Service Area | WA | US |  |

Note:

- *The Healthy People 2030 Heart Disease target is adjusted to account for all diseases of the heart.

## CARDIOVASCULAR DISEASE

## ABOUT HEART DISEASE \& STROKE

Heart disease is the leading cause of death in the United States, and stroke is the fifth leading cause. ...Heart disease and stroke can result in poor quality of life, disability, and death. Though both diseases are common, they can often be prevented by controlling risk factors like high blood pressure and high cholesterol through treatment.

In addition, making sure people who experience a cardiovascular emergency - like stroke, heart attack, or cardiac arrest - get timely recommended treatment can reduce their risk for long-term disability and death. Teaching people to recognize symptoms is key to helping more people get the treatment they need.

- Healthy People 2030 (https://health.gov/healthypeople)

## Age-Adjusted Heart Disease \& Stroke Deaths

## Heart Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted heart disease mortality rate of 139.8 deaths per 100,000 population in the Total Service Area.

BENCHMARK $>$ Lower than the national mortality rate.

Heart Disease: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Healthy People $2030=127.4$ or Lower (Adjusted)
 Informatics. Data extracted April 2022.
US Department of Health and Human Services. Healthy People 2030. August 2020. http://www.healthypeople.gov
Notes:

- The Healthy People 2030 Heart Disease target is adjusted to account for all diseases of the heart.

## Stroke Deaths

Between 2018 and 2020, there was an annual average age-adjusted stroke mortality rate of 35.0 deaths per 100,000 population in the Total Service Area.

Stroke: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Notes: - Asked of all respondents.

## Total Cardiovascular Risk

Total cardiovascular risk reflects the individual-level risk factors which put a person at increased risk for cardiovascular disease, including:

- High Blood Pressure
- High Blood Cholesterol
- Cigarette Smoking
- Physical Inactivity
- Overweight/Obesity

Modifying these behaviors and adhering to treatment for high blood pressure and cholesterol are critical both for preventing and for controlling cardiovascular disease.

A total of $85.3 \%$ of Total Service Area adults report one or more cardiovascular risk factors, such as being overweight, smoking cigarettes, being physically inactive, or having high blood pressure or cholesterol.

DISPARITY $>$ Significantly higher in Douglas County. Cardiovascular risk increases with age and is

## Present One or More Cardiovascular Risks or Behaviors

(Total Service Area, 2022)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [Item 115]
Notes: - Reflects all respondents.

- Cardiovascular risk is defined as exhibiting one or more of the following: 1) no leisure-time physical activity; 2) regular/occasional cigarette smoking; 3) high blood pressure; 4) high blood cholesterol; and/or 5) being overweight/obese.

эd Heart

Perceptions of Heart Disease and Stroke as a Problem in the Community
(Key Informants, 2022)

Sources: - PRC Online Key Informant Survey, PRC, Inc.
Notes:
Asked of all respondents.

Among those rating this issue as a "major problem," reasons related to the following:

## Obesity

We are an overweight and unfit society, which leads to heart disease and stroke. - Community Leader population risk factors include obesity, diabetes, tobacco use, sedentary lifestyle, poor diet, chronic stress, aging population. this is all compounded by high rate of COVID infections and the cardiovascular complications associated with it, and low uptake of COVID vaccine to prevent such complications. - Social Services Provider Obesity, unmanaged weight, lack of exercise, substance use. - Public Health Representative
Heart disease and stroke have a strong connection with obesity and smoking, which seems to be prevalent in our communities. In addition, both tend to be more common in lower socioeconomic regions like ours. - Public Health Representative

## Incidence/Prevalence

Because I see lots of people impacted by this. - Community Leader
Affects so many people. - Community Leader

## Access to Care/Services

Lack of resources, time, and knowledge to prevent heart disease. - Public Health Representative

## Aging Population

As people age heart disease becomes a greater risk. Studies have shown high rates of stress, substance abuse including smoking and drinking, being overweight, and a significant percentage of persons over 50 . All of these factors combined with poverty that impacts availability of a healthy diet and the other factors listed above contribute to a significant problem for our population - Social Services Provider

## CANCER

## ABOUT CANCER

Cancer is the second leading cause of death in the United States. ...The cancer death rate has declined in recent decades, but over 600,000 people still die from cancer each year in the United States. Death rates are higher for some cancers and in some racial/ethnic minority groups. These disparities are often linked to social determinants of health, including education, economic status, and access to health care.

Interventions to promote evidence-based cancer screenings - such as screenings for lung, breast, cervical, and colorectal cancer - can help reduce cancer deaths. Other effective prevention strategies include programs that increase HPV vaccine use, prevent tobacco use and promote quitting, and promote healthy eating and physical activity. In addition, effective targeted therapies and personalized treatment are key to helping people with cancer live longer.

- Healthy People 2030 (https://health.gov/healthypeople)

## Age-Adjusted Cancer Deaths

## All Cancer Deaths

Between 2018 and 2020, there was an annual average age-adjusted cancer mortality rate of 148.0 deaths per 100,000 population in the Total Service Area.

## Cancer: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Healthy People $2030=122.7$ or Lower

## Cancer Incidence

"Incidence rate" or "case rate" is the number of newly diagnosed cases in a given population in a given year, regardless of outcome. These rates are also age-adjusted. It is usually expressed as cases per 100,000 population per year.

The highest cancer incidence rates are for female breast cancer and prostate cancer.
DISPARITY $>$ Colorectal cancer incidence is significantly lower in Douglas County.

## Cancer Incidence Rates by Site

(Annual Average Age-Adjusted Incidence per 100,000 Population, 2014-2018)
Chelan Co Douglas Co = Grant Co = Okanogan Co - Total Service Area =WA US

## Prevalence of Cancer

A total of $10.3 \%$ of surveyed Total Service Area adults report having ever been diagnosed with cancer. The most common types include breast cancer, skin cancer, and colorectal cancer.

[^4]- Behavioral Risk Factor Surveillance System Survey Data. Atlanta, Georgia. United States Department of Health and Human Services, Centers for Disease Control and Prevention (CDC): 2019 Washington data
2020 PRC National Health Survey, PRC, Inc.
Notes: - Reflects all respondents.

## Prevalence of Cancer

 (Total Service Area, 2022)

RELATED ISSUE See also Nutrition, Physical Activity \& Weight and Tobacco Use in the Modifiable Health Risks section of this report.

## ABOUT CANCER RISK

Reducing the nation's cancer burden requires reducing the prevalence of behavioral and environmental factors that increase cancer risk.

- All cancers caused by cigarette smoking could be prevented. At least one-third of cancer deaths that occur in the United States are due to cigarette smoking.
- According to the American Cancer Society, about one-third of cancer deaths that occur in the United States each year are due to nutrition and physical activity factors, including obesity.
- National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention

## Cancer Screenings

The American Cancer Society recommends that both men and women get a cancer-related checkup during a regular doctor's checkup. It should include examination for cancers of the thyroid, testicles, ovaries, lymph nodes, oral cavity, and skin, as well as health counseling about tobacco, sun exposure, diet and nutrition, risk factors, sexual practices, and environmental and occupational exposures.

Screening levels in the community were measured in the PRC Community Health Survey relative to three cancer sites: female breast cancer (mammography); cervical cancer (Pap smear/HPV testing); and colorectal cancer (colonoscopy/sigmoidoscopy and fecal occult blood testing).

FEMALE BREAST CANCER
The US Preventive Services Task Force (USPSTF) recommends biennial screening mammography for women aged 50 to 74 years.

## CERVICAL CANCER

The US Preventive Services Task Force (USPSTF) recommends screening for cervical cancer every 3 years with cervical cytology alone in women aged 21 to 29 years. For women aged 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting). The USPSTF recommends against screening for cervical cancer in women who have had a hysterectomy with removal of the cervix and do not have a history of a high-grade precancerous lesion (i.e., cervical intraepithelial neoplasia [CIN] grade 2 or 3 ) or cervical cancer.

## COLORECTAL CANCER

The US Preventive Services Task Force (USPSTF) recommends screening for colorectal cancer starting at age 50 years and continuing until age 75 years.

- US Preventive Services Task Force, Agency for Healthcare Research and Quality, US Department of Health \& Human Services

Note that other organizations (e.g., American Cancer Society, American Academy of Family Physicians, American College of Physicians, National Cancer Institute) may have slightly different screening guidelines.

Among women age $50-74,71.9 \%$ have had a mammogram within the past 2 years.
"Appropriate cervical cancer screening" includes Pap smear testing (cervical cytology) every three years in women age 21 to 29 and Pap smear testing and/or HPV testing every 5 years in women age 30 to 65 . Women 21 to 65 with hysterectomy are excluded.
"Appropriate colorectal cancer screening" includes a fecal occult blood test within the past year and/or a lower endoscopy (sigmoidoscopy or colonoscopy) within the past 10 years.

Among Total Service Area women age 21 to 65, 78.2\% have had appropriate cervical cancer screening.

BENCHMARK $>$ Fails to satisfy the Healthy People 2030 objective.

Among all adults age $50-75,79.1 \%$ have had appropriate colorectal cancer screening.

## Key Informant Input: Cancer

The greatest share of key informants taking part in an online survey characterized Cancer as a "moderate problem" in the community.

# Perceptions of Cancer <br> as a Problem in the Community 

(Key Informants, 2022)

- Major Problem = Moderate Problem - Minor Problem = No Problem At All

|  | $22.2 \%$ | $49.2 \%$ |
| :--- | :--- | :--- |

Among those rating this issue as a "major problem," reasons related to the following:

## Incidence/Prevalence

It seems to be occurring at an alarming rate. - Community Leader
Vital records information. - Public Health Representative
Rate of incidence presented. - Other Health Provider
Many people that I know have either had cancer, are battling cancer, or have loved one afflicted. - Social Services Provider
It affects people across the board and all levels of income and need. - Community Leader
Cancer affects so many people. Can do more with early detection, increasing the chances of survival. Community Leader

## Access to Care/Services

I believe there are not enough resources to address the types of cancer that are happening in this community. Preventative or treatment. - Community Leader
Due to the lack of treatment options in the community. - Social Services Provider

## Access to Care for Uninsured/Underinsured

1) The population without insurance or under-insured individual often delay preventive care which will delay early cancer diagnosis. 2) The lack of timely appointments for ultrasound, colonoscopy services. 3) Un-insured and under-insured can be prevented from necessary diagnostic tests due to cost - Public Health Representative

## Competition

It is an issue due to competition for local care and consistency of physicians. - Social Services Provider

## Environmental Contributors

Only an assumption, but cancer seems more prevalent in our community and I wonder if it has to do with orchard chemicals in the valley. - Community Leader

## Impact on Quality of Life

I listed major, not because of the number of incidences, but because of the impact it has on those with the diagnosis and their families. - Community Leader

## RESPIRATORY DISEASE (INCLUDING COVID-19)

## ABOUT RESPIRATORY DISEASE

Respiratory diseases affect millions of people in the United States. ...More than 25 million people in the United States have asthma. Strategies to reduce environmental triggers and make sure people get the right medications can help prevent hospital visits for asthma. In addition, more than 16 million people in the United States have COPD (chronic obstructive pulmonary disease), which is a major cause of death. Strategies to prevent the disease - like reducing air pollution and helping people quit smoking - are key to reducing deaths from COPD.

Interventions tailored to at-risk groups can also help prevent and treat other respiratory diseases for example, pneumonia in older adults and pneumoconiosis in coal miners. And increasing lung cancer screening rates can help reduce deaths from lung cancer through early detection and treatment.

- Healthy People 2030 (https://health.gov/healthypeople)

## Age-Adjusted Respiratory Disease Deaths

## Chronic Lower Respiratory Disease Deaths (CLRD)

Between 2018 and 2020, there was an annual average age-adjusted CLRD mortality rate of 41.0 deaths per 100,000 population in the Total Service Area.

BENCHMARK $>$ Worse than the Washington mortality rate.

$\qquad$

## Perceptions of Respiratory Diseases <br> as a Problem in the Community

(Key Informants, 2022)

- Major Problem - Moderate Problem - Minor Problem - No Problem At All

Sources: - PRC Online Key Informant Survey, PRC, Inc
Notes: Asked of all respondents.

Among those rating this issue as a "major problem," reasons related to the following:

## Contributing Factors

The long-term effects of Covid-19 and a proclivity of the population to chronic disease. - Public Health Representative
Tobacco/marijuana/vaping products create problems and there is limited support to address it. - Community Leader

## Environmental Contributors

Several fire seasons contribute to chronic lung conditions due to wildfire smoke. - Public Health Representative

## Age-Adjusted COVID-19 Deaths

## COVID-19 Deaths

In 2020, there was an annual average age-adjusted COVID-19 mortality rate of 50.1 deaths per 100,000 population in the Total Service Area.

BENCHMARK $>$ Higher than the Washington mortality rate but much lower than the US rate.
ible).

## COVID-19: Age-Adjusted Mortality (2020 Annual Average Deaths per 100,000 Population)

Sources: - CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.

## Prevalence of COVID-19 Vaccination

In 2022, 72.8\% of the Total Service Area population was fully or partially vaccinated against COVID-19.

## Prevalence of COVID-19 Vaccination

(Total Service Area, 2022)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [Items 311-312]
Notes: - Asked of all respondents.

## Adverse Changes in Health Behaviors

Surveyed adults reported a change in certain health-related behaviors and activities since the pandemic began in March 2020:

EXERCISE $>21.0 \%$ are exercising less often.
SLEEP $>18.7 \%$ are getting good sleep less often.
DIETARY HABITS $>15.7 \%$ are eating unhealthy foods or overeating more often.
RELATIONSHIPS $>9.9 \%$ are arguing with household members more often.
ALCOHOL USE $>6.7 \%$ are drinking alcohol more often.
TOBACCO USE $>3.7 \%$ are smoking or vaping more often.

# Adverse Changes in Health-Related Behaviors Since the Beginning of the Pandemic (Total Service Area, 2022) 

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [Items 304-309]

- Asked of all respondents.
- Beginning of pandemic specified as March 2020.

Among those rating this issue as a "major problem," reasons related to the following:

## Vaccination Coverage

Low vaccine rate, anti-mask/anti-mandate mentality, misinformation about the vaccines and about COVID infection and consequences. The high rates of infection over the past 2 years with every surge (original, Delta, Omicron variants) has flooded the system and displaced others who need health care resources and access for non-COVID health issues. Loss of health care staff because they refused to get vaccinated has compounded the problem. - Social Services Provider

Only $50 \%$ of population eligible for vaccinations have received it. - Public Health Representative Unvaccinated, government mistrust, inadequate PH resources to track and monitor. - Other Health Provider

Our community maintains a low vaccination rate and compliance with masking, causing our region to be one of the highest positivity rates per 100,000 in Washington State. - Community Leader

## Awareness/Education

Our community like no other time in my lifetime is divided. Smart people have chosen to believe false information regarding vaccinees, testing and masking. It makes it really hard to navigate. In my world, you can walk into a business, and they act like COVID was a made-up political poly from our government. So the confusion for customers is huge. Also the perception that testing is hard to get. It gets exhausting for those of us tasked to lead in this time. Another problem is the access to "normal" and preventive healthcare due to COVID restrictions. Community Leader
According to the DOH we are still surging. Too many people in these counties think there is no problem. It blows my mind. Now they think that in March we don't have to wear masks anywhere. I'm gearing up for problems at a nonprofit that I run. - Community Leader
Misinformation being spread. Blatant defiance from public school teachers and officials. Racism. Anti-masking in the name of "liberty" in our rural conservative area. Lack of accountability from other businesses and healthcare providers. - Social Services Provider

## Impact on Quality of Life

This has been an ongoing challenge for over two years now. It has affected the workplace and home lives of most all residents. It has sickened countless people, cause the death of others, caused job loss due to vaccination status and left healthcare facilities understaffed. The created additional challenges with compensation and burnout. - Community Leader

The reaction to the disease will have a major future effect on school and preschool children. Politics and mandates are a major contributor to this being a problem. - Community Leader
It has taken over our entire lives. It is a major problem because all of the restrictions impact everything that we do. Hospitalizations are still up and people are still getting sick. - Community Leader

## Incidence/Prevalence

Numbers from DOH and CH have been eye-opening. By the looks of it, the numbers are dropping at least for those that are vaccinated. - Community Leader
The numbers of people infected and its impact on ability of businesses to remain open. - Social Services Provider

Lack of Adherence to Safety Measures
Although cases decreasing, noncompliance to masking, continuous messaging by anti-government people, and general attitude of the population contribute to the ongoing problem. - Other Health Provider

## INJURY \& VIOLENCE

#### Abstract

ABOUT INJURY \& VIOLENCE INJURY - In the United States, unintentional injuries are the leading cause of death in children, adolescents, and adults younger than 45 years. ...Many unintentional injuries are caused by motor vehicle crashes and falls, and many intentional injuries involve gun violence and physical assaults. Interventions to prevent different types of injuries are key to keeping people safe in their homes, workplaces, and communities.

Drug overdoses are now the leading cause of injury deaths in the United States, and most overdoses involve opioids. Interventions to change health care providers' prescribing behaviors, distribute naloxone to reverse overdoses, and provide medications for addiction treatment for people with opioid use disorder can help reduce overdose deaths involving opioids.

VIOLENCE - Almost 20,000 people die from homicide every year in the United States, and many more people are injured by violence. ...Many people in the United States experience physical assaults, sexual violence, and gun-related injuries. Adolescents are especially at risk for experiencing violence. Interventions to reduce violence are needed to keep people safe in their homes, schools, workplaces, and communities.

Children who experience violence are at risk for long-term physical, behavioral, and mental health problems. Strategies to protect children from violence can help improve their health and well-being later in life.

- Healthy People 2030 (https://health.gov/healthypeople)

## Unintentional Injury

## Age-Adjusted Unintentional Injury Deaths

Between 2018 and 2020, there was an annual average age-adjusted unintentional injury mortality rate of 47.8 deaths per 100,000 population in the Total Service Area.

DISPARITY $>$ Much higher in Okanogan County.

Unintentional Injuries: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Sources: - PRC Online Key Informant Survey, PRC, Inc.
Notes: - Asked of all respondents.
Asked of all respondents

Among those rating this issue as a "major problem," reasons related to the following:

## Contributing Factors

Having worked with many clients affected by injury and violence, I believe this to be a major problem. A lack of repercussions to the offender make them more likely to repeat as well. - Social Services Provider

Domestic violence impacts the entire family unit - teaching young children that violence is how to release frustration and solve issues. Other injury impacts stem from drug abuse and crime. Occupational injuries are frequent due to the local agricultural economy. - Social Services Provider

Rural injuries. Domestic violence. Substance use/abuse. - Public Health Representative

## Access to Care/Services

There are not enough emergency responders who are trained in identifying DV or IPV. - Community Leader

## Alcohol/Drug Use

Substance use and mental health needs are major concerns in North Central. These issues can lead to selfinjury, specifically with increased suicide risk, as well as violence associated with substance use. - Other Health Provider

## Denial/Stigma

There are many people in our counties that believe that crime or especially violent crime doesn't happen in our area, and if it does it doesn't happen to people "like us". This causes more shame for people to face when they are reporting these types of activities. - Social Services Provider

## DIABETES

## ABOUT DIABETES

More than 30 million people in the United States have diabetes, and it's the seventh leading cause of death. ...Some racial/ethnic minorities are more likely to have diabetes. And many people with diabetes don't know they have it.

Poorly controlled or untreated diabetes can lead to leg or foot amputations, vision loss, and kidney damage. But interventions to help people manage diabetes can help reduce the risk of complications. In addition, strategies to help people who don't have diabetes eat healthier, get physical activity, and lose weight can help prevent new cases.

- Healthy People 2030 (https://health.gov/healthypeople)

## Age-Adjusted Diabetes Deaths

Between 2018 and 2020, there was an annual average age-adjusted diabetes mortality rate of 23.5 deaths per 100,000 population in the Total Service Area.

Diabetes: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Sources: - CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.

## Prevalence of Diabetes

A total of $\mathbf{1 2 . 8 \%}$ of Total Service Area adults report having been diagnosed with diabetes.
BENCHMARK $>$ Significantly higher than the Washington percentage.

## Prevalence of Diabetes

Another $8.3 \%$ of adults have been diagnosed with "pre-diabetes" or "borderline" diabetes.
 Sources: • 2022 PRC Community Health Survey, PRC, Inc. [ltem 121]

- Behavioral Risk Factor Surveillance System Survey Data. Atlanta, Georgia. United States Department of Health and Human Services, Centers for Disease Control and Prevention (CDC): 2019 Washington data.

Notes: - Asked of all respondents

## Prevalence of Diabetes

(Total Service Area, 2022)

## Key Informant Input: Diabetes

# Perceptions of Diabetes as a Problem in the Community (Key Informants, 2022) <br> - Major Problem = Moderate Problem - Minor Problem - No Problem At All 

Among those rating this issue as a "major problem," reasons related to the following:

## Awareness/Education

Prevention education for diabetes care. I know LOTS of people who are pre-diabetic and diabetic. Some of them are using insulin. My concern is the diabetes epidemic and the lack of education for what is, in MANY cases, a PREVENTABLE DISEASE! Lunches in the schools set our children up for diabetes. The lack of solid nutritional information is mind-boggling to me. - Community Leader
Combination of education (lack of knowledge about nutrition), sedentary workday and sedentary lifestyle outside of work hours. - Community Leader
Access to nutritional counseling, lifestyle, obesity, high blood pressure. - Public Health Representative
Lack of education about nutrition and access to physical exercise during period of extreme heat and cold. Poor diet and lack of exercise often lead to weight gain and diabetes. Drugs are prescribed that have terrible side effects rather than examining alternative natural medicine, diet, and affordable exercise instruction that is covered by health insurance and Medicaid/Medicare - Social Services Provider
Emphasis on education in early detection of the disease appears to be lacking and is critical to getting people on the right path to management of this condition. - Community Leader
Lack of resources for individuals to learn how to care for themselves and resources to purchase supplies and fresh foods. - Public Health Representative
Getting information from healthcare providers about insurance-sponsored programs available. - Community Leader

## Income/Poverty

Poverty means that people cannot afford foods that support healthy diet; we have a healthy food desert. Lack of adequate physical activity related to work schedules (need to work to support families), limited options for exercise that are accessible. Cultural-foods are high in carbs and fat, quantities excessive, celebrations center around food and drink. Heredity-predisposition to diabetes. Health care access-cost of best and newest medications to treat diabetes is very expensive and not covered well by insurance and are unaffordable for those that lack insurance. - Social Services Provider

## Affordable Medications/Supplies

Cost of medications. - Social Services Provider
Access to affordable insulin. - Community Leader

## Disease Management

Following physician instructions. - Other Health Provider

Adhering to the necessary diet and medicine regimen to keep it under control. - Community Leader

## Obesity

Obesity as risk for diabetes is a problem throughout the community. Education regarding the prevention and treatment of diabetes is not seen as a priority by residents. - Community Leader

## Access to Affordable Healthy Food

Being able to afford food that is healthy, such as fresh fruits and vegetables. - Public Health Representative

## Diagnosis/Treatment

Detection and ability to manage with diet. - Community Leader
Lifestyle
A healthy lifestyle to avoid it. - Community Leader

## KIDNEY DISEASE

## ABOUT KIDNEY DISEASE

More than 1 in 7 adults in the United States may have chronic kidney disease (CKD), with higher rates in low-income and racial/ethnic minority groups. And most people with CKD don't know they have it. ...People with CKD are more likely to have heart disease and stroke - and to die early. Managing risk factors like diabetes and high blood pressure can help prevent or delay CKD. Strategies to make sure more people with CKD are diagnosed early can help people get the treatment they need.

Recommended tests can help identify people with CKD to make sure they get treatments and education that may help prevent or delay kidney failure and end-stage kidney disease (ESKD). In addition, strategies to make sure more people with ESKD get kidney transplants can increase survival rates and improve quality of life.

```
- Healthy People 2030 (https://health.gov/healthypeople)
```

## Age-Adjusted Kidney Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted kidney disease mortality rate of 3.0 deaths per 100,000 population in the Total Service Area.

## Activity Limitations

## ABOUT DISABILITY \& HEALTH

Studies have found that people with disabilities are less likely to get preventive health care services they need to stay healthy. Strategies to make health care more affordable for people with disabilities are key to improving their health.

In addition, people with disabilities may have trouble finding a job, going to school, or getting around outside their homes. And they may experience daily stress related to these challenges. Efforts to make homes, schools, workplaces, and public places easier to access can help improve quality of life and overall well-being for people with disabilities.

- Healthy People 2030 (https://health.gov/healthypeople)

# Key Informant Input: Disability \& Chronic Pain 

ty \& Chronic

Perceptions of Disability \& Chronic Pain
as a Problem in the Community
(Key Informants, 2022)

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

Access to services that don't lead to dependency as well as isolation of the patient are difficult to reach for many of our low-income community members. even services and programs within the county can be difficult to reach if you live in Havillah and have to get a ride to Omak in the middle of winter or summer. pain leads to depression and depression tends to spiral down making the pain even worse. For example, a person with a broken wrist suddenly finds that they cannot drive, cook, or do most of the parts of daily self-care. Without help, domestic settings tend to lean into clutter and dirt and there is a helplessness about how to correct it. Instead, increasing home health visits, and engaging in groups that are access either virtually or in person with the help of a van service can change a patient's view of their existence and save them from loneliness and depression. - Social Services Provider

## Aging Population

We have an aging population, and diseases associated with aging can cause a significant amount of disability and pain. The counties covered have many communities where residents are not very healthy: obesity leads to many chronic disabilities accompanied by pain. We have a high incidence of obesity in our region. - Public Health Representative

## Diagnosis/Treatment

There are few accommodations and few options for alternative treatments for those who suffer from disability and chronic pain. Integrated medicine is out of reach for many who are indigent with these issues. The health care system treats them in a vacuum. - Social Services Provider
Income/Poverty
We live in a high poverty and low education community. Lots of adverse childhood experiences, ongoing mental health issues impact one's ability to cope with stress, pain. Agricultural industry is a major employer-workers at high risk for acute injury, chronic occupational injury and disease, and do not have access to job retraining, language acquisition, adult education, to make career changes. Disability is accepted as an alternative income source when one's ability to work in a limited field has been exhausted and relocation is impossible. - Social Services Provider

## Alzheimer's Disease

## ABOUT DEMENTIA

Alzheimer's disease is the most common cause of dementia and the sixth leading cause of death in U.S. adults. 1 Nearly 6 million people in the United States have Alzheimer's, and that number will increase as the population ages.

Dementia refers to a group of symptoms that cause problems with memory, thinking, and behavior. People with dementia are more likely to be hospitalized, and dementia is linked to high health care costs.

While there's no cure for Alzheimer's disease, early diagnosis and supportive care can improve quality of life. And efforts to make sure adults with symptoms of cognitive decline - including memory loss - are diagnosed early can help improve health outcomes in people with dementia. Interventions to address caregiving needs can also help improve health and well-being in people with dementia.

```
- Healthy People 2030 (https://health.gov/healthypeople)
```

## Age-Adjusted Alzheimer's Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted Alzheimer's disease mortality rate of 58.2 deaths per 100,000 population in the Total Service Area.

BENCHMARK $>$ Well above the state and US mortality rates.

[^6] Informatics. Data extracted April 2022.

## Key Informant Input: Dementia/Alzheimer's Disease

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

There are absolutely not enough facilities and services to address the amount of folks who are experiencing dementia/Alzheimer's disease. If the person with the diagnosis doesn't have sufficient private funds, or any dual diagnosis, there are no options in this community. Navigating in-home care and services is an incredibly difficult maze and asking someone who already is experiencing diminishing capacity to navigate that on their own is cruel. - Community Leader
Due to the lack of available treatment options. - Social Services Provider
Few facilities that can handle these patients. Many at home with limited resources. - Community Leader
I feel like there is a lack of resources for older people who have dementia/Alzheimer's disease, or the resources that are there are difficult to navigate. - Community Leader

## Access for Medicare/Medicaid Patients

It is a problem everywhere, but our community does not have enough care facilities that will take Medicare patients. This means that many families have to try and provide care even though they are not fully qualified to do so. - Social Services Provider

## Aging Population

The counties included in the survey have an aging population, and memory loss commonly occurs as people age. Much of the older population in our region lives in rural areas where caregiving support and resources are limited. Often family members or friends end up taking care of loved ones, which can create major stress and challenges. - Public Health Representative

## Impact on Caregivers/Families

The care of individuals is a huge burden for responsible family members as victims of this disease decline. Professional care is hugely expensive, so in-home care is usually the option for those that lack financial resources. Cost of outside options far exceed the average annual income of families in the region. - Community Leader
Incidence/Prevalence
We see these patients through the emergency room. - Other Health Provider

## Caregiving

A total of $\mathbf{2 3 . 1} \%$ of Total Service Area adults currently provide care or assistance to a friend or family member who has a health problem, long-term illness, or disability.

```
Act as Caregiver to a Friend or Relative with a Health Problem, Long-Term Illness, or Disability
```

BIRTHS

## BIRTH OUTCOMES \& RISKS

## Low-Weight Births

Low birthweight babies, those who weigh less than 2,500 grams (5 pounds, 8 ounces) at birth, are much more prone to illness and neonatal death than are babies of normal birthweight.<br>Largely a result of receiving poor or inadequate prenatal care, many low-weight births and the consequent health problems are preventable.

## FAMILY PLANNING

## ABOUT FAMILY PLANNING

Nearly half of pregnancies in the United States are unintended, and unintended pregnancy is linked to many negative outcomes for both women and infants. ...Unintended pregnancy is linked to outcomes like preterm birth and postpartum depression. Interventions to increase use of birth control are critical for preventing unintended pregnancies. Birth control and family planning services can also help increase the length of time between pregnancies, which can improve health for women and their infants.

Adolescents are at especially high risk for unintended pregnancy. Although teen pregnancy and birth rates have gone down in recent years, close to 200,000 babies are born to teen mothers every year in the United States. Linking adolescents to youth-friendly health care services can help prevent pregnancy and sexually transmitted infections in this age group.

- Healthy People 2030 (https://health.gov/healthypeople)

## Births to Adolescent Mothers

Between 2013 and 2019, there were 30.5 births to adolescents age 15 to 19 per 1,000 women age 15 to 19 in the Total Service Area.

BENCHMARK $>$ Higher than the Washington and US findings.

Teen Birth Rate (Births to Adolescents Age 15-19 per 1,000 Females Age 15-19, 2013-2019)

Sources: - Centers for Disease Control and Prevention, National Vital Statistics System.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org)

Notes:

- This indicator reports the rate of total births to women under the age of 15-19 per 1,000 female population age 15-19. This indicator is relevant because in $m$ cases, teen parents have unique social, economic, and health support services. Additionally, high rates of teen pregnancy may indicate the prevalence of unsafe sex practices.

## Key Informant Input: Infant Health \& Family Planning

h \& Family

Perceptions of Infant Health and Family Planning
as a Problem in the Community
(Key Informants, 2022)

- Major Problem - Moderate Problem - Minor Problem - No Problem At All
$9.0 \%$
47.8\%
31.3\%

Sources: - PRC Online Key Informant Survey, PRC, Inc.
Notes: - Asked of all respondents.

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

Access to infant health and family planning are not accessible for underserved communities but additionally there is a lot of stigma in asking for help or asking for resources. Need programs/services that are culturally appropriate or recognize that this type of education and information is new information to many residents i.e., it is not something that is discussed in family units or school. - Community Leader
Prenatal care, pregnant teens; many struggling with substance abuse are not accessing this service. Nurse Family Partnership and others are not getting the referrals they need. - Social Services Provider

No established midwife, doula, or birth center access here. I'm also worried about Planned Parenthood and women's access to family planning in today's political and social climate. - Community Leader

## Contributing Factors

Neonatal abstinence syndrome (substance use by mother/father). Lack of prenatal home visiting programs. Lack of family planning. - Public Health Representative
In North Central, there are a significant number of migrant women who give birth without medical insurance.
Overall, we believe adequate prenatal and postnatal care are critical health services for mothers and infants. -
Other Health Provider

# MODIFIABLE HEALTH RISKS 

## NUTRITION

## ABOUT NUTRITION \& HEALTHY EATING

Many people in the United States don't eat a healthy diet. ...People who eat too many unhealthy foods - like foods high in saturated fat and added sugars - are at increased risk for obesity, heart disease, type 2 diabetes, and other health problems. Strategies and interventions to help people choose healthy foods can help reduce their risk of chronic diseases and improve their overall health.

Some people don't have the information they need to choose healthy foods. Other people don't have access to healthy foods or can't afford to buy enough food. Public health interventions that focus on helping everyone get healthy foods are key to reducing food insecurity and hunger and improving health.

- Healthy People 2030 (https://health.gov/healthypeople)

## Daily Recommendation of Fruits/Vegetables

To measure fruit and vegetable consumption, survey respondents were asked multiple questions, specifically about the foods and drinks they consumed on the day prior to the interview.

A total of $\mathbf{2 9 . 2} \%$ of Total Service Area adults report eating five or more servings of fruits

Consume Five or More Servings of Fruits/Vegetables Per Day

## Consume Five or More Servings of Fruits/Vegetables Per Day (Total Service Area, 2022)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [ltem 125]
Notes:

- Asked of all respondents
- For this issue, respondents were asked to recall their food intake on the previous day.

## Difficulty Accessing Fresh Produce

Respondents were asked: "How difficult is it for you to buy fresh produce like fruits and vegetables at a price you can afford? Would you say: Very Difficult, Somewhat Difficult, Not Too Difficult, or Not At All Difficult?"

RELATED ISSUE See also Food Access in the Social Determinants of Health section of this report.

## Level of Difficulty Finding Fresh Produce at an Affordable Price (Total Service Area, 2022)

- Very Difficult
- Somewhat Difficult
- Not Too Difficult
- Not At All Difficult

[^7]

However, 15.7\% of Total Service Area adults find it "very" or "somewhat" difficult to access affordable fresh fruits and vegetables.

BENCHMARK $>$ Better (lower) than the US percentage.
DISPARITY $>$ Lowest in Douglas County. Those more likely to report difficulty finding affordable

Notes: - Asked of all respondents.

## PHYSICAL ACTIVITY

## ABOUT PHYSICAL ACTIVITY

Physical activity can help prevent disease, disability, injury, and premature death. The Physical Activity Guidelines for Americans lays out how much physical activity children, adolescents, and adults need to get health benefits. Although most people don't get the recommended amount of physical activity, it can be especially hard for older adults and people with chronic diseases or disabilities.

Strategies that make it safer and easier to get active - like providing access to community facilities and programs - can help people get more physical activity. Strategies to promote physical activity at home, at school, and at childcare centers can also increase activity in children and adolescents.

- Healthy People 2030 (https://health.gov/healthypeople)

## Leisure-Time Physical Activity

Leisure-time physical activity includes any physical activities or exercises (such as running, calisthenics, golf, gardening, walking, etc.) which take place outside of one's line of work.

A total of $\mathbf{2 8 . 8 \%}$ of Total Service Area adults report no leisure-time physical activity in the past month.

BENCHMARK $>$ Higher than the Washington percentage. Fails to satisfy the Healthy People 2030 objective.

No Leisure-Time Physical Activity in the Past Month
Healthy People $2030=21.2 \%$ or Lower

[^8]
## Activity Levels

## ADULTS: RECOMMENDED LEVELS OF PHYSICAL ACTIVITY

Adults should do 2 hours and 30 minutes a week of moderate-intensity (such as walking), or 1 hour and 15 minutes ( 75 minutes) a week of vigorous-intensity aerobic physical activity (such as jogging), or an equivalent combination of moderate- and vigorous-intensity aerobic physical activity. The guidelines also recommend that adults do muscle-strengthening activities, such as push-ups, situps, or activities using resistance bands or weights. These activities should involve all major muscle groups and be done on two or more days per week.

The report finds that nationwide nearly 50 percent of adults are getting the recommended amounts of aerobic activity and about 30 percent are engaging in the recommended muscle-strengthening activity.

- $\quad 2013$ Physical Activity Guidelines for Americans, US Department of Health and Human
Services. www.cdc.gov/physicalactivity

## Adults

# A total of $\mathbf{2 4 . 2 \%}$ of Total Service Area adults regularly participate in adequate levels of both aerobic and strengthening activities (meeting physical activity recommendations). 

BENCHMARK $>$ Fails to satisfy the Healthy People 2030 objective.
DISPARITY $>$ Unfavorably low in Douglas County. Women and residents age 40 and older are
"Meeting physical activity recommendations" includes adequate levels of both aerobic and strengthening activities:
Aerobic activity is one of the following: at least 150 minutes per week of light to moderate activity, 75 minutes per week of vigorous activity, or an equivalent combination of both.
Strengthening activity is at least 2 sessions per week of exercise designed to strengthen muscles.

## Meets Physical Activity Recommendations

Healthy People $2030=28.4 \%$ or Higher

# Meets Physical Activity Recommendations 

(Total Service Area, 2022)

- Includes children reported to have one or more hours of physical activity on each of the seven days preceding the survey

## Access to Physical Activity

In 2019, there were 14.9 recreation/fitness facilities for every $\mathbf{1 0 0 , 0 0 0}$ population in the Total Service Area

BENCHMARK $>$ Higher than the national rate.

Population With Recreation \& Fitness Facility Access
(Number of Recreation \& Fitness Facilities per 100,000 Population, 2019)

[^9]- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

Notes: - Recreation and fitness facilities are defined by North American Industry Classification System (NAICS) Code 713940 , which include Establishments engaged in operating facilities which offer "exercise and other active physical fitness conditioning or recreational sports activities." Examples include athletic clubs, gymnasiums, dance centers, tennis clubs, and swimming pools. This indicator is relevant because access to recreation and fitness facilities encourages physical activity and other healthy behaviors.

## WEIGHT STATUS

## ABOUT OVERWEIGHT \& OBESITY

Obesity is linked to many serious health problems, including type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to have obesity, which increases their risk of chronic diseases.

Culturally appropriate programs and policies that help people eat nutritious foods within their calorie needs can reduce overweight and obesity. Public health interventions that make it easier for people to be more physically active can also help them maintain a healthy weight.

- Healthy People 2030 (https://health.gov/healthypeople)

Body Mass Index (BMI), which describes relative weight for height, is significantly correlated with total body fat content. The BMI should be used to assess overweight and obesity and to monitor changes in body weight. In addition, measurements of body weight alone can be used to determine efficacy of weight loss therapy. BMI is calculated as weight (kg)/height squared $\left(\mathrm{m}^{2}\right)$. To estimate BMI using pounds and inches, use: [weight (pounds)/height squared (inches ${ }^{2}$ )] $\times 703$.

In this report, overweight is defined as a BMI of 25.0 to $29.9 \mathrm{~kg} / \mathrm{m}^{2}$ and obesity as a BMI $\geq 30 \mathrm{~kg} / \mathrm{m}^{2}$. The rationale behind these definitions is based on epidemiological data that show increases in mortality with BMIs above $25 \mathrm{~kg} / \mathrm{m}^{2}$. The increase in mortality, however, tends to be modest until a BMI of $30 \mathrm{~kg} / \mathrm{m}^{2}$ is reached. For persons with a $\mathrm{BMI} \geq 30 \mathrm{~kg} / \mathrm{m}^{2}$, mortality rates from all causes, and especially from cardiovascular disease, are generally increased by 50 to 100 percent above that of persons with BMIs in the range of 20 to $25 \mathrm{~kg} / \mathrm{m}^{2}$.

National Heart, Lung, and Blood Institute in Cooperation With The National Institute of Diabetes and Digestive and Kidney Diseases. September 1998.

## Adult Weight Status

CLASSIFICATION OF OVERWEIGHT AND OBESITY BY BMI

Underweight
Normal

Overweight
Obese BMI (kg/m²)
<18.5
18.5-24.9
$25.0-29.9$
$\geq 30.0$

Source: Clinical Guidelines on the Identification, Evaluation, and Treatment of Overweight and Obesity in Adults: The Evidence Report. National Institutes of Health. National Heart, Lung, and Blood Institute in Cooperation With The National Institute of Diabetes and Digestive and Kidney Diseases. September 1998.

## Overweight Status

Here, "overweight"
includes those
respondents with a BMI value $\geq 25$.

Just over 7 in 10 Total Service Area adults (71.8\%) are overweight.
BENCHMARK $>$ Hiaher than the Washinaton and US percentaaes.

## Prevalence of Total Overweight (Overweight and Obese)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [ltem 128]

- Behavioral Risk Factor Surveillance System Survey Data. Atlanta, Georgia. United States Department of Health and Human Services, Centers for Disease Control and Prevention (CDC): 2019 Washington data
2020 PRC National Health Survey, PRC, Inc
- Based on reported heights and weights, asked of all respondents.
- The definition of overweight is having a body mass index (BMI), a ratio of weight to height (kilograms divided by meters squared), greater than or equal to 25.0 , regardless of gender. The definition for obesity is a BMI greater than or equal to 30.0 .

The overweight prevalence above includes $36.5 \%$ of Total Service Area adults who are obese.

BENCHMARK $>$ Higher than the Washington and US percentages.
DISPARITY $>$ Favorably low in Douglas County. Significantly higher among residents between the ages of 40 and 64.
"Obese" (also included in overweight prevalence discussed previously) includes respondents with a BMI value $\geq 30$.

## Prevalence of Obesity

Healthy People $2030=36.0 \%$ or Lower

## Prevalence of Obesity

(Total Service Area, 2022)
Healthy People $2030=36.0 \%$ or Lower

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [Item 128]
US Department of Health and Human Services. Healthy People 2030. August 2020. http://www.healthypeople.gov

- Based on reported heights and weights, asked of all respondents
- The definition of obesity is having a body mass index (BMI), a ratio of weight to height (kilograms divided by meters squared), greater than or equal to 30.0 , regardless of gender.

## Relationship of Overweight With Other Health Issues

The correlation between overweight and various health issues cannot be disputed.

Overweight and obese adults are more likely to report a number of adverse health conditions, as outlined in the following chart.

# Relationship of Overweight With Other Health Issues (Total Service Area, 2022) 

\author{

Notes: - Based on reported heights and weights, asked of all respondents

## Children's Weight Status

## ABOUT WEIGHT STATUS IN CHILDREN \& TEENS

In children and teens, body mass index (BMI) is used to assess weight status - underweight, healthy weight, overweight, or obese. After BMI is calculated for children and teens, the BMI number is plotted on the CDC BMI-for-age growth charts (for either girls or boys) to obtain a percentile ranking.
Percentiles are the most commonly used indicator to assess the size and growth patterns of individual children in the United States. The percentile indicates the relative position of the child's BMI number among children of the same sex and age.

BMI-for-age weight status categories and the corresponding percentiles are shown below:

- Underweight $<5^{\text {th }}$ percentile
- Healthy Weight $\quad \geq 5^{\text {th }}$ and $<85^{\text {th }}$ percentile
- Overweight $\quad \geq 85^{\text {th }}$ and $<95^{\text {th }}$ percentile
- Obese $\geq 95^{\text {th }}$ percentile
- Centers for Disease Control and Prevention

Based on the heights/weights reported by surveyed parents, $48.0 \%$ of Total Service Area children age 5 to 17 are overweight or obese ( $\geq 85$ th percentile).

BENCHMARK $>$ Higher than the national finding.

## Prevalence of Overweight in Children

(Parents of Children Age 5-17)

The childhood overweight prevalence above includes $35.7 \%$ of area children age 5 to 17 who are obese ( $\geq 95$ th percentile).

BENCHMARK $>$ Much higher than the national finding. Fails to satisfy the Healthy People 2030 objective

Prevalence of Obesity in Children
(Children Age 5-17 Who Are Obese; BMI in the 95 ${ }^{\text {th }}$ Percentile or Higher)
Healthy People $2030=15.5 \%$ or Lower

## Key Informant Input:

## Nutrition, Physical Activity \& Weight

Key informants taking part in an online survey most often characterized Nutrition, Physical Activity \& Weight as a "moderate problem" in the community.

# Perceptions of Nutrition, Physical Activity, and Weight as a Problem in the Community <br> (Key Informants, 2022) 

Among those rating this issue as a "major problem," reasons related to the following:

## Awareness/Education

Resources and education to learn about proper nutrition and activity to reduce weight and chances of chronic disease. - Public Health Representative
The false information about what our bodies need to be properly fueled and the culture of inactivity that pervades our society. I don't perceive doctors as being well-versed on diet either. Honestly, I don't trust the medical profession often when it comes to nutrition and physical activity. Doctors always want me to take a pill to treat the symptom, but hardly ever address the cause. - Community Leader
Not understanding portion control. Eating healthy does not mean only eating salads. Ten minutes of activity makes a difference, just start. - Social Services Provider
Where do our families go for education and exercise? - Community Leader

## Contributing Factors

## Lack of information. Severe poverty. - Social Services Provider

Cost of fresh fruits and vegetables and protein; even with access people don't teach them because they never learned to like them growing up. Screen time is excessive, too accessible, often used as a babysitter, so kids and adults are sedentary. Parents don't feel kids are safe playing outdoors in lots of neighborhoods or in remote locations. Overweight is seen as healthy-kids that have normal BMIs are thought of as too skinny. Organized sports are exclusive. Non-athletic kids lack safe exercise options. - Social Services Provider
Lack of free public resources, bike paths, sidewalks, and healthy eating choices, combined with a short-sighted city government that doesn't support a positive, healthy lifestyle. - Community Leader
POVERTY restricts budgets into filling food but not nutritionally adequate food. Local food pantry system does not receive enough food and support of volunteers to increase education around nutrition. More Incentives for physical activity are needed throughout the county and not just in the Omak Okanogan area. - Social Services Provider

## Access to Care/Services

There are not enough trauma informed body movement options. - Community Leader
Time and availability of exercise opportunities (i.e., gyms, trails). - Community Leader Lack of recreational programs for all ages. - Community Leader
Lack of activity spaces in downtown or other recreation areas, activity trails, adult "playgrounds," etc. Lots of fastfood restaurants, lack of healthy "fast food" options. - Community Leader

## Access to Affordable Healthy Food

Inability of low-income individuals to afford health foods, such as fresh fruits and vegetables. Prevalence of obesity that becomes generational. - Public Health Representative
Many low-income folks don't seem to have resources to purchase health food. It appears that more means of intervention for all kinds of folks is necessary. - Community Leader
Eating healthy is expensive. Subsidies should be available for healthy food. Community events and education should be available for people who want to make a change in lifestyle. Gyms can be expensive. - Community Leader

## Lack of Providers

Lack of nutritional counselors. - Public Health Representative

## Lack of Time

The time and ability to exercise and to make good food choices. - Social Services Provider

Increase in obesity rates. - Community Leader

## SUBSTANCE ABUSE

## ABOUT DRUG \& ALCOHOL USE

More than 20 million adults and adolescents in the United States have had a substance use disorder in the past year. ...Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. Opioid use disorders have become especially problematic in recent years. Substance use disorders are linked to many health problems, and overdoses can lead to emergency department visits and deaths.

Effective treatments for substance use disorders are available, but very few people get the treatment they need. Strategies to prevent substance use - especially in adolescents - and help people get treatment can reduce drug and alcohol misuse, related health problems, and deaths.

- Healthy People 2030 (https://health.gov/healthypeople)

## Age-Adjusted Cirrhosis/Liver Disease Deaths

Between 2018 and 2020, the Total Service Area reported an annual average age-adjusted cirrhosis/liver disease mortality rate of 14.8 deaths per 100,000 population.

BENCHMARK $>$ Worse than the US rate and fails to satisfy the Healthy People 2030 objective.

Cirrhosis/Liver Disease: Age-Adjusted Mortality
(2018-2020 Annual Average Deaths per 100,000 Population)
Healthy People 2030 Objective $=10.9$ or Lower

Sources: - CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.

- US Department of Health and Human Services. Healthy People 2030. August 2020. http://www.healthypeople.gov

## Alcohol Use

## Excessive Drinking

Excessive drinking includes heavy and/or binge drinkers:

- HEAVY DRINKERS $~>~ m e n ~ r e p o r t i n g ~ 2+~ a l c o h o l i c ~ d r i n k s ~ p e r ~ d a y ~ o r ~ w o m e n ~ r e p o r t i n g ~$ $1+$ alcoholic drink per day in the month preceding the interview.
- BINGE DRINKERS - men reporting 5+ alcoholic drinks or women reporting 4+ alcoholic drinks on any single occasion during the past month.

A total of $\mathbf{1 7 . 0 \%}$ of area adults are excessive drinkers (heavy and/or binge drinkers).

## Excessive Drinkers

## Excessive Drinkers

(Total Service Area, 2022)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [ltem 136]
Notes: - Asked of all respondents.

- Excessive drinking reflects the number of persons aged 18 years and over who drank more than two drinks per day on average (for men) or more than one drink per day on average (for women) OR who drank 5 or more drinks during a single occasion (for men) or 4 or more drinks during a single occasion (for women) during the past 30 days.

## Age-Adjusted Unintentional Drug-Related Deaths

Between 2018 and 2020, there was an annual average age-adjusted unintentional drug-related mortality rate of 12.4 deaths per $\mathbf{1 0 0 , 0 0 0}$ population in the Total Service Area.

BENCHMARK $>$ Lower than the state and (especially) US mortality rates.

Unintentional Drug-Related Deaths: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Sources: - CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.

## Illicit Drug Use

For the purposes of this survey, "illicit drug use" includes use of illegal substances or of prescription drugs taken without a physician's order.

Note: As a self-reported measure - and because this indicator reflects potentially illegal behavior

- it is reasonable to expect that it might be underreported, and that actual illicit drug use in the community is likely higher.

## A total of 1.6\% of Total Service Area adults acknowledge using an illicit drug in the past month

BENCHMARK $>$ Satisfies the Healthv Peodle 2030 obiective.

Illicit Drug Use in the Past Month
Healthy People $2030=12.0 \%$ or Lower

|  | $2.6 \%$ | $0.0 \%$ | $1.7 \%$ |  | $1.2 \%$ |

## Use of Prescription Opioids

Opioids are a class of drugs used to treat pain Examples presented to respondents include morphine, codeine, hydrocodone, oxycodone, methadone, and fentanyl. Common brand name opioids include Vicodin, Dilaudid, Percocet, OxyContin, and Demerol.

A total of $\mathbf{1 7 . 9 \%}$ of Total Service Area report using a prescription opioid drug in the past year.
BENCHMARK $>$ Higher than the national percentage.
w-income

## Used a Prescription Opioid in the Past Year

## Used a Prescription Opioid in the Past Year <br> (Total Service Area, 2022)

## Alcohol \& Drug Treatment

A total of $6.6 \%$ of Total Service Area adults report that they have sought professional help for an alcohol or drug problem at some point in their lives.

> Have Ever Sought Professional Help for an Alcohol/Drug-Related Problem

## Personal Impact From Substance Abuse

Area adults were also asked to what degree their lives have been impacted by substance abuse (whether their own abuse or that of another).

Most Total Service Area residents' lives have not been negatively affected by substance abuse (either their own or someone else's).

## Degree to Which Life Has Been Negatively Affected by Substance Abuse (Self or Other's) (Total Service Area, 2022)

- Great Deal
- Somewhat
- Little
- Not At All

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [Item 52]

However, $41.1 \%$ have felt a personal impact to some degree ("a little," "somewhat," or "a great deal").

BENCHMARK $>$ Higher than the national finding.
DISPARITY $>$ Unfavorably high in Okanogan County. More often reported among women, adults aged

> Life Has Been Negatively Affected by Substance Abuse (by Self or Someone Else)

## Life Has Been Negatively Affected by Substance Abuse (by Self or Someone Else) <br> (Total Service Area, 2022)

[^10]
## Key Informant Input: Substance Abuse

## Perceptions of Substance Abuse

as a Problem in the Community
(Key Informants, 2022)

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

Again, no inpatient services. - Community Leader
I am unaware of any substance abuse treatment in my community. - Community Leader
Intake process is slow and cumbersome. Supporters of a family member with substance abuse do not know of the services available. Too difficult to access help. - Community Leader

Few slots are available for treatment and many that need it, most have impaired judgement and will not seek it. There needs to be a better mechanism to move people into treatment, even if they are resistant. - Community Leader
We only have one center that I know of that works to address substance abuse treatment and recovery. There is a long wait list and not enough room to detox in the facility. - Social Services Provider
Immediate availability. - Community Leader
Access to mental health. - Social Services Provider
Lack of treatment services in Grant County. - Public Health Representative
Lack of quality treatment facilities. Lack of inpatient treatment centers. Lack of housing so people abusing substances can have a stable environment to begin treatment and stay clean and sober. - Public Health Representative
THC-based vape use is on the rise in our school age children. - Community Leader
There are not enough facilities for detox or treatment. - Community Leader

## Contributing Factors

Recent changes to State law regarding possession and use of drugs have made it impossible to mandate treatment (e.g. - Drug Court for non-violent felony convictions). There is very little proactive efforts being made in our community. Our treatment centers have little to no outreach effort and general rely on referrals from other agencies. Treatment workers rarely leave the facilities where they work, rather than going to the person suffering from addiction (jails, homes, homeless encampments, etc.). - Community Leader
I think this goes hand-in-hand with mental health. Not having enough access to resources, shelter, food, support. - Community Leader

Social stigmas, losing work/income, lack of insurance/no way to pay for treatment, lack of enforcement by law officials to follow-through with treatment. - Community Leader
We do not have sufficient counselors and providers, places to serve people. Substance use disorder has intergenerational impact, hard to stop the cycle. There is drug trafficking, users, dealers, diversion, an alternative source of income. - Social Services Provider

Getting people into treatment centers in a timely manner. Limited pathways to get out of addiction and become a contributing member of society (limited job opportunities, safe places to live, sustainable mental health care). Social Services Provider

## Lack of Providers

Lack of providers, both inpatient and outpatient, transportation, and transitional housing to accompany treatment and after care. - Social Services Provider
Need more providers and an option for longer term stays, then more transitional housing when they leave inpatient programs. - Community Leader
Not enough providers. - Other Health Provider
Lack of providers and appropriate medical coverage. - Other Health Provider

## Denial/Stigma

## Community stigma. - Public Health Representative

Many people are afraid to "deal" with people who have substance abuse issues. The population doesn't want to admit that we have problems such as these. - Social Services Provider
Stigma is a significant barrier. - Community Leader

## Easy Access

Student access and increased usage has been noted in the school. Often difficult to get assistance from county entities. - Community Leader
Access and availability for youth. - Community Leader

## Homelessness

Intervention is necessary "on the street." - Community Leader
Increase in homeless population and correlation to drug use. - Community Leader
Incidence/Prevalence
Substance use disorder. - Community Leader
We have seen a substantial increase in substance abuse over the past two years and there doesn't seem to be much in the way of support. - Community Leader

## Lack of Coordination of Services

Coordination of services and a need to create stronger partnerships. - Social Services Provider

## Most Problematic Substances

Key informants (who rated this as a "major problem") clearly identified alcohol as causing the most problems in the community, followed by heroin/other opioids, methamphetamine/other amphetamines, prescription medications, marijuana, and club drugs.

| SUBSTANCES VIEWED AS |  |
| :--- | :---: |
| MOST PROBLEMATIC IN THE COMMUNITY |  |
| (Among Key Informants Rating Substance Abuse as a "Major Problem") |  |

## TOBACCO USE

## ABOUT TOBACCO USE

More than 16 million adults in the United States have a disease caused by smoking cigarettes, and smoking-related illnesses lead to half a million deaths each year.

Most deaths and diseases from tobacco use in the United States are caused by cigarettes. Smoking harms nearly every organ in the body and increases the risk of heart disease, stroke, lung diseases, and many types of cancer. Although smoking is widespread, it's more common in certain groups, including men, American Indians/Alaska Natives, people with behavioral health conditions, LGBT people, and people with lower incomes and education levels.

Several evidence-based strategies can help prevent and reduce tobacco use and exposure to secondhand smoke. These include smoke-free policies, price increases, and health education campaigns that target large audiences. Methods like counseling and medication can also help people stop using tobacco.

- Healthy People 2030 (https://health.gov/healthypeople)

## Cigarette Smoking

## Cigarette Smoking Prevalence

A total of $14.7 \%$ of Total Service Area adults currently smoke cigarettes, either regularly

Cigarette Smoking Prevalence (Total Service Area, 2022)

## Smoking Cessation

44.3\% of regular smokers went without smoking for one day or longer in the past year because they were trying to quit smoking.

BENCHMARK $>$ Fails to satisfy the Healthy People 2030 objective.

## Have Stopped Smoking for One Day or Longer in the Past Year (Everyday Smokers) <br> Healthy People $2030=65.7 \%$ or Higher

## Other Tobacco Use

s) or other

## Use of Vaping Products

(Total Service Area, 2022)

- Use Every Day
- Use on Some Days
- Tried, Don't Currently Use
- Never Tried

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [ltem 135]
Notes: - Asked of all respondents.

However, 2.9 \% currently use vaping products either regularly (every day) or occasionally (on some days).

BENCHMARK $>$ Lower than the Washington and (especially) US percentages.

## Currently Use Vaping Products

(Every Day or on Some Days)

## Currently Use Vaping Products

(Total Service Area, 2022)

## Key Informant Input: Tobacco Use

The greatest share of key informants taking part in an online survey characterized Tobacco Use as a "moderate problem" in the community.

## Perceptions of Tobacco Use as a Problem in the Community <br> (Key Informants, 2022)

Among those rating this issue as a "major problem," reasons related to the following:

## Incidence/Prevalence

Purely anecdotally, this community appears to have a high number of active tobacco users. - Community Leader
I see so many people smoking or using chewing tobacco in the community. - Social Services Provider
I feel that tobacco use, including e-cigarettes, are huge issues for teenagers under 18. - Community Leader
Vaping. Student access and usage of vaping in schools has increased dramatically. - Community Leader
Young people are vaping at incredibly high numbers, mirroring other issues that arose during the pandemic. Social Services Provider

## Easy Access

It just happens to be easily accessible to our youth. - Social Services Provider

## Contributing Factors

The region has a high incidence of COPD, lung cancer, and heart disease, all connected to smoking. Lower socioeconomic populations tend to smoke more than wealthier communities. - Public Health Representative

## SEXUAL HEALTH

## ABOUT HIV \& SEXUALLY TRANSMITTED INFECTIONS

Although many sexually transmitted infections (STIs) are preventable, there are more than 20 million estimated new cases in the United States each year - and rates are increasing. In addition, more than 1.2 million people in the United States are living with HIV (human immunodeficiency virus).

Adolescents, young adults, and men who have sex with men are at higher risk of getting STIs. And people who have an STI may be at higher risk of getting HIV. Promoting behaviors like condom use can help prevent STIs.

Strategies to increase screening and testing for STIs can assess people's risk of getting an STI and help people with STIs get treatment, improving their health and making it less likely that STIs will spread to others. Getting treated for an STI other than HIV can help prevent complications from the STI but doesn't prevent HIV from spreading.

- Healthy People 2030 (https://health.gov/healthypeople)

## HIV

## HIV Prevalence

In 2018, there was a prevalence of 69.4 HIV cases per $\mathbf{1 0 0 , 0 0 0}$ population in the Total Service Area.

BENCHMARK $>$ Well below the state and national findings.

HIV Prevalence
(Prevalence Rate of HIV per 100,000 Population, 2018)

[^11]
## Sexually Transmitted Infections (STIs)

## Chlamydia \& Gonorrhea

In 2018, the chlamydia incidence rate in the Total Service Area was $\mathbf{3 8 0 . 2}$ cases per $\mathbf{1 0 0 , 0 0 0}$ population.

The Total Service Area gonorrhea incidence rate in 2018 was 79.5 cases per 100,000 population.

BENCHMARK $>$ Both chlamydia and gonorrhea incidence rates were lower than the related state and national rates.

Chlamydia \& Gonorrhea Incidence (Incidence Rate per 100,000 Population, 2018)

- Total Service Area - WA - US

Chlamydia

Gonorrhea

Sources: - Centers for Disease Control and Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

Notes: - This indicator is relevant because it is a measure of poor health status and indicates the prevalence of unsafe sex practices

## Key Informant Input: Sexual Health

A plurality of key informants taking part in an online survey characterized Sexual Health as a "minor problem" in the community.

# Perceptions of Sexual Health <br> as a Problem in the Community <br> (Key Informants, 2022) 

Among those rating this issue as a "major problem," reasons related to the following:

## Contributing Factors

Inadequate access to prophylactics and open communication with students about sexual health. - Public Health Representative
No medically accurate comprehensive sexual health being taught in schools. Abstinence is only models being pushed forward even though they are proven not to work. Youth being sexually exploited and/or abused from a very young age. - Social Services Provider
I do not believe high school students are taught healthy/safe ways of maturing sexually. Access to women's health clinics for young adults is limited. Region has reputation in the past of lots of STDs and teen pregnancies. - Community Leader

## Awareness/Education

Lack of reproductive health education. - Public Health Representative
Access to Care/Services
In the greater north central Washington tri-county area, there are huge expanses of area that have no sexual health resources. That means individuals have to independently find transportation, take time out of their schedules, and seek out these health resources, which are already shrouded in shame. - Community Leader

## Teen Pregnancy

Teen pregnancies. - Community Leader

## ACCESS TO HEALTH CARE

## HEALTH INSURANCE COVERAGE

## Type of Health Care Coverage

## A total of 58.9\% of Total Service Area adults age 18 to 64 report having health care coverage

Survey respondents were asked a series of questions to determine their health care insurance coverage, if any, from either private or government-sponsored sources.

Here, lack of health insurance coverage reflects respondents age 18 to 64 (thus, excluding the Medicare population) who have no type of insurance coverage for health care services neither private insurance nor governmentsponsored plans (e.g. Medicaid).

## Lack of Health Insurance Coverage

Among adults age 18 to 64, 8.0\% report having no insurance coverage for health care expenses.

BENCHMARK $>$ Better (lower) than the Washington finding.

## Lack of Health Care Insurance Coverage

(Adults Age 18-64)
Healthy People $2030=7.9 \%$ or Lower

| $7.1 \%$ | $5.3 \%$ | $10.4 \%$ |  |  |  |

- Asked of all respondents under the age of 65 .

## Lack of Health Care Insurance Coverage

(Adults Age 18-64; Total Service Area, 2022)
Healthy People $2030=7.9 \%$ or Lower

## DIFFICULTIES ACCESSING HEALTH CARE

## ABOUT HEALTH CARE ACCESS

Many people in the United States don't get the health care services they need. ...About 1 in 10 people in the United States don't have health insurance. People without insurance are less likely to have a primary care provider, and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

Sometimes people don't get recommended health care services, like cancer screenings, because they don't have a primary care provider. Other times, it's because they live too far away from health care providers who offer them. Interventions to increase access to health care professionals and improve communication - in person or remotely - can help more people get the care they need.

- Healthy People 2030 (https://health.gov/healthypeople)

## Difficulties Accessing Services

This indicator reflects the percentage of the total population experiencing problems accessing health care in the past year, regardless of whether they needed or sought care. It is based on reports of the barriers outlined in the following section.

> Experienced Difficulties or Delays of Some Kind in Receiving Needed Health Care in the Past Year

## Experienced Difficulties or Delays of Some Kind in Receiving Needed Health Care in the Past Year (Total Service Area, 2022)

## Barriers to Health Care Access

To better understand health care access barriers, survey participants were asked whether any of seven types of barriers to access prevented them from seeing a physician or obtaining a needed prescription in the past year.

Again, these percentages reflect the total population, regardless of whether medical care was needed or sought.

Of the tested barriers, appointment availability and difficulty finding a physician impacted the greatest shares of Total Service Area adults.

BENCHMARK $>$ The barriers of appointment availability and difficulty finding a physician affect service area adults significantly more than they do adults across the US. Conversely, cost (of doctors visit/ prescriptions), inconvenient office hours, and language/cultural barriers affect service area adults significantly less than they do adults across the US.

## Barriers to Access Have Prevented Medical Care in the Past Year

In addition, 8.6\% of adults have skipped doses or stretched a needed prescription in the past year in order to save costs.

[^12]
# Accessina Health Care for Children 

## d medical

Surveyed parents were also asked if, within the past year, they experienced any trouble receiving medical care for a randomly selected child in their household.

## Had Trouble Obtaining Medical Care for Child in the Past Year (Parents of Children 0-17)

Sources: - 2022 PRC Community Health Survey, PRC, Inc. [ltem 104]

- Asked of all respondents with children 0 to 17 in the household.

## Key Informant Input: Access to Health Care Services

to Health

## Perceptions of Access to Health Care Services as a Problem in the Community <br> (Key Informants, 2022)

- Major Problem = Moderate Problem - Minor Problem = No Problem At All

Among those rating this issue as a "major problem," reasons related to the following:

## Access to Care/Services

In Chelan, Douglas and Okanogan counties Wenatchee offers the most condensed and extensive healthcare services. These three counties make up a huge geographical area, meaning that folks who do not live in the immediate Wenatchee area have to find suitable and timely transportation to even GET to health care. There are not enough providers for the demand. Options are either emergency department or waiting months for an appointment, and that doesn't include specialized care. - Community Leader
It takes a very long time to get an appointment in almost all specialties. Patients should be able to schedule appointments online (this was an option at one time). Playing email tag back and forth through the MyChart request an appointment functionality is more inefficient than just making a phone call. - Community Leader
Very limited access to general healthcare during last two years, long wait for appointments, long wait for specialty care. - Public Health Representative
DISTANCE DISTANCE DISTANCE. I currently have two neighbors who are in major pain with sciatica to the point that they can barely walk. One was instructed to come to Wenatchee to be seen. After that he was instructed to come to Wenatchee again to have an MRI. A third appointment revealed that the MRI was defective, so he had to go home and come back down again and then was referred to a pain clinic in Omak. This is a gentleman in his late 70s. He had to have an 80-year-old neighbor drive him down. My other neighbor is younger but undergoing the same expectation to drive down to Wenatchee. Driving, let alone riding in a car is the worst thing you can do for sciatica but there is no consideration of the difficulty. For example, when the MRI was defective in the first case - why didn't a new MRI get processed that day? and maybe even have an appointment for review to save him from the pain let alone the expense of travel for a senior citizen. There has to be expansion of services. - Social Services Provider
Accessibility to alternative therapeutic services and occupational, physical, and speech language pathology for children with disabilities. - Social Services Provider
North Central has insufficient educational outreach on preventive health actions for issues like diabetes, heart health, and other chronic illnesses. - Other Health Provider
Ability to get appointments with doctors' offices. - Community Leader
Primary Care. - Other Health Provider
It takes weeks and sometimes months to get test results completed after the initial appointment is made.
Reaching a specialist is time consuming through Confluence Health, it's much faster to leave Confluence and travel to another facility or community. - Community Leader
Appointments are very difficult to get with healthcare providers. - Community Leader
Lack of Providers
Recruiting, and retaining, quality physicians to our local clinics. It is difficult to establish care as well as a relationship with a physician when they move or are relocated shortly thereafter. - Community Leader

It seems that few specialists are traveling to outlying areas, making the only access to specialized care in Wenatchee, Spokane or Seattle. This creates a problem for some in the areas to access health care services because of transportation. - Community Leader
The biggest challenge is hiring and retaining qualified professionals to provide the service. - Social Services Provider
This is not so much a health issue as a gap in regional services. Transgender services are very hard to come by in our valley and I'm not certain how welcoming our region is to people who are LGBTQ+. Would be great to have specialty services that could serve transgender people so they would not have to travel out of area to meet their health needs. - Other Health Provider
Covid restrictions making it impossible to get any services at all. - Community Leader

## Insurance Issues

Lack of adequate insurance coverage creating reluctance to seek medical services. Lack of physicians, particularly specialists, creating long wait times to see medical providers. Lack of adequate skilled nursing facility beds resulting in a lack of placement options. Shortage of medical staff, including nurses, trained care providers, CNAs, specialists, and PCP doctors in that order. - Public Health Representative

## Transportation

Low-income households not having access to reliable transportation or phone/Wi-Fi. Public transportation is not reaching our most rural areas. Financial barriers. Fear around health services in the farmworker community. Social Services Provider

## Vision Care

Vision, for the same reason. Not covered by Medicare. Medicare is now costing one senior $\$ 285$ per month off the top of their already low SS income. Unaffordable and soon many more seniors will be homeless. This is a crisis. - Community Leader

Access to eye care is a problem....6-8 months out for an appointment. Employee satisfaction is a problem and impacting the community perception of the CH organization. This results in people leaving the valley for their healthcare needs and truly is resulting in a healthcare issue. CH HR has a terrible reputation in the community. Support your healthcare teams, be willing to modify hours and shifts to retain loyal employees. Give your managers some training, some are woefully under prepared academically and experientially for the jobs they have been hired to. - Community Leader

## PRIMARY CARE SERVICES

## ABOUT PREVENTIVE CARE

Getting preventive care reduces the risk for diseases, disabilities, and death - yet millions of people in the United States don't get recommended preventive health care services.

Children need regular well-child and dental visits to track their development and find health problems early, when they're usually easier to treat. Services like screenings, dental check-ups, and vaccinations are key to keeping people of all ages healthy. But for a variety of reasons, many people don't get the preventive care they need. Barriers include cost, not having a primary care provider, living too far from providers, and lack of awareness about recommended preventive services.

Teaching people about the importance of preventive care is key to making sure more people get recommended services. Law and policy changes can also help more people access these critical services.

- Healthy People 2030 (https://health.gov/healthypeople)

## Access to Primary Care

In 2021, there were 270 primary care physicians in the Total Service Area, translating to a rate of $\mathbf{1 0 2 . 6}$ primary care physicians per $\mathbf{1 0 0 , 0 0 0}$ population.

Sources: - US Department of Health \& Human Services, Health Resources and Services Administration, Area Health Resource File.

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

Notes: - Doctors classified as "primary care physicians" by the AMA include: General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs, and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded. This indicator is relevant because a shortage of health professionals contributes to access and health status issues.

Having a specific source of ongoing care includes having a doctor's office, clinic, urgent care center, walk-in clinic, health center facility, hospital outpatient clinic, HMO or prepaid group, military/VA clinic, or some other kind of place to go if one is sick or needs advice about his or her health. This resource is crucial to the concept of "patient-centered medical homes" (PCMH).

A hospital emergency room is not considered a specific source of ongoing care in this instance.

## Specific Source of Ongoing Care

A total of $77.6 \%$ of Total Service Area adults were determined to have a specific source of ongoing medical care.

BENCHMARK $>$ Fails to satisfy the Healthy People 2030 obiective.

Have a Specific Source of Ongoing Medical Care
Healthy People $2030=84.0 \%$ or Higher

## ORAL HEALTH

## ABOUT ORAL HEALTH

Tooth decay is the most common chronic disease in children and adults in the United States.
. Regular preventive dental care can catch problems early, when they're usually easier to treat. But many people don't get the care they need, often because they can't afford it. Untreated oral health problems can cause pain and disability and are linked to other diseases.

Strategies to help people access dental services can help prevent problems like tooth decay, gum disease, and tooth loss. Individual-level interventions like topical fluorides and community-level interventions like community water fluoridation can also help improve oral health. In addition, teaching people how to take care of their teeth and gums can help prevent oral health problems.

## Key Informant Input: Oral Health

## Perceptions of Oral Health <br> as a Problem in the Community

(Key Informants, 2022)

- Major Problem - Moderate Problem - Minor Problem - No Problem At All
20.3\%
32.8\%
35.9\%

Sources: - PRC Online Key Informant Survey, PRC, Inc.
Notes:

- Asked of all respondents.

Among those rating this issue as a "major problem," reasons related to the following:

## Contributing Factors

There are not enough dentists, hygienists and there are very few who have dental insurance coverage. Too expensive. Water is not fluoridated. People don't have good brushing habits. Diets are poor and increase tooth decay. - Social Services Provider
There is a lack of dentists in the community. - Social Services Provider
Because Medicare does not cover oral health, supplement plans are unaffordable for many seniors living on SS income only. If they even have a home these days. - Community Leader

I think oral health is a major problem because smoking tobacco and other drug use is a big problem. Also, lack of pediatric dentist options in the region. I think the only one is in Moses Lake with two doctors. - Community Leader

## Access for Medicare/Medicaid Patients

Lack of dentists in the private sector that take Medicaid/Medicare. - Public Health Representative Lack of care for Medicaid clients. - Other Health Provider

Medicare and Medicaid do not cover dental care. Most Medicare Advantage Programs do not have dental coverage. The free or low-cost dental clinics will pull teeth, but they will not treat cavities, do crowns, or even preventive dental services. - Public Health Representative

## Access to Care for Uninsured/Underinsured

Dentistry is not accessible, many people do not have dental insurance, prices can quickly become astronomical. FHC's Dental Clinic is usually booked out for close to a year. Many local dental offices are not taking new clients. - Social Services Provider

Lack of access for indigent population who need more preventative care, underinsured, or not insured. - Social Services Provider

## Affordable Care/Services

It's too expensive unless you have insurance, but the insurance isn't that great either. - Community Leader I feel like dental insurance is harder to come by and dental care is more expensive for more people. Community Leader

## VISION CARE

A total of $49.2 \%$ of Total Service Area residents had an eye exam in the past two years during which their pupils were dilated.

BENCHMARK $>$ Lower than the US percentage. Fails to satisfy the Healthy People 2030 objective.

## Had an Eye Exam in the Past Two Years During Which the Pupils Were Dilated <br> Healthy People $2030=61.1 \%$ or Higher
